Preface

Microcomputers are everywhere! They are the most popular electronic tool today. Their lightweight desktop, lap or pocket designs, and powerful BASIC language programming capabilities, place them at the forefront of the new wave of high technology sweeping homes, offices, laboratories, schools.

Not toys at all, these powerful, miniature decision makers are highly useful in a business workspace, learning arena, scientific environment, as well as for practical jobs around the home.

The number of jobs to which a microcomputer can be put is limited only by the scope of the imagination. In this program-packed book we have attempted to create 222 new, specific, practical, serviceable, hard-working sets of applications software in BASIC for your use.

The programs in this book are written for newcomers and beginners, as well as for advanced users of microcomputers who might be searching for new and different ways to make their machines do real work. Our intention has been to provide a giant library of easy-to-type ready-to-run or nearly-ready BASIC programs so your computer can perform useful tasks. You type them in and your computer does the rest.

Math Helper Programs

Random Numbers

Introduction

With the immense popularity of microcomputers has come a great need for practical, useful software to make these machines do real work. The computers are very fast and have large memories. They are powerful, flexible and versatile. But what can they do?

The aim of this book is to provide 222 complete easy-to-type, nearly-ready-to-run (many ready to run) sets of program listings for you to use in making your own microcomputer—desktop, lap, briefcase, pocket—work for you.

Once you've purchased a computer and know how to turn it on, you need down-to-earth workable programs to run the computer. In this book, we provide program ideas and appropriate complete easy-to-type sets of program listings for you to use in your own computer, to make it work for you.

The 222 BASIC programs in this library are considered *not machine specific.* That is, they are designed to run on any computer which is set up for programming in the BASIC language. Some of these programs may run in your computer exactly as you find them in this book. More likely, you will make minor modifications to some program lines.

In writing a *universal* non-machine specific book, the

most universal forms of BASIC are used. However, each hardware manufacturer offers his equipment with a slightly different version of BASIC. Please check your computer's instruction manual for the list of BASIC words in its vocabulary.

See how each BASIC word is used in your computer. Compare that usage with the use of similar words in this book. Note any differences and make appropriate changes to any program as you type it into your computer.

These programs have a timeless quality to them and will be as useful tomorrow as today. It is hoped they provide an exciting learning invitation to the new and beginning programmer, and refreshing exercise for more advanced computer owners.

The book has been divided into several sections to make future reference easier:

Fun & Games includes game programs and programs designed to make computer games easier to write and use.

Text On Text has programs which are useful when using the computer to handle words and symbols.

Number Crunching is a section of programs designed to turn your computer into a powerful math machine.

Gee Whiz includes programs you will use to WOW your friends, neighbors, relatives.

Learning Programs contains educational materials, useful for students and teachers. Learn geography, chemistry, astronomy, science, history, and more.

Family Programs are personal improvement software for use in and around the home.

Business Matters includes programs for use in the small-business office, professional office, and other workspace environment.

Money, Financial & Banking is a section devoted to personal money management.

Graphs has various easy-to-use video displays.

Random Numbers shows different ways to obtain pseudorandom numbers and things to do with those numbers.

Odds & Ends is just that.

Naturally, these sections are not rigid dividing lines. You probably will find programs in the business or learning sections which are useful in your home. Or you may take

one of the home programs to work or school. Try them all. They're great fun to run. And they are especially designed to be short so you won't have to spend hours typing them into your computer.

Making them RUN

These programs will run on any computer which can be programmed in the BASIC language. However, it is likely you will need to modify some or all of the lines of a program to make it work with the version of BASIC in your computer. Each hardware manufacturer makes his own BASIC slightly different from all other manufacturers.

Graphics commands, especially, will differ from computer system to computer system.

Multiple-statement lines, using the colon (:) symbol, can be quite different in various hardware brand names. Many computers don't even permit multiple statements on one BASIC program line. If you find that your computer will not accept two BASIC statements on one line, change the one line into two or more, each with its own individual line number.

Such things as line numbering, spacing between words or symbols, logical tests, multiplication symbols, print statements, precision math, and other instructions and results. may be different.

Refer to your owner's manual to compare your computer's version of BASIC to that found in this book.

We assume you have read the owner's manual and instructional pamphlets which came with your computer and any accessories you may have. You know how to hook the computer to your TV or other accessories you have. You know how to type programs into the computer. If you don't know these beginning steps, please review the instructions in the owner's manual.

Computers used to test the programs in this book include IBM, IBM PCjr, Texas Instruments TI-99/4A, TIMEX 1000, Sinclair ZX-81, TRS-80 Color Computer, Commodore 64, VIC 20, APPLE II, APPLE IIe, Atari 400, Atari 800, TRS-80 Model 4, TRS-80 Model 16, TRS-80 pockets, PC-1, PC-2, PC-3, PC-4, and Sharp pockets. Each program in this book was tested on one of the above computers.

Since the programs in this book have been written and

tested on a wide variety of systems, you will find differences in random number generation, ASCII character-string numbers, screen PRINT locations, optional LET use, CLS and other screen-clearing methods, spacing between BASIC commands and variables, TIME$ and DATE$, and other BASIC vocabulary and formats.

Different computers use RND, RAN, RAND, and other BASIC words to generate a random number. And not all allow resetting the generator's seed through words like RANDOMIZE or RAND. Check the BASIC language in your computer to see which word generates a random number and which resets the random number generator seed. You may need to modify games and other random-number-using programs in this book.

As a general rule, microcomputers use the ASCII numbers 65 to 90 to represent the upper-case alphabet letters A to Z. But not all computers do. And the other ASCII keyboard numbers may vary. See your owner's manual for the ASCII character set used in your computer. You may need to make changes in programs using CHR$ and other BASIC words.

How do you print a particular letter or number at one specific spot on the face of your video monitor or TV screen? Some computers use PRINT AT. Others require PRINT @. Others use even different methods of locating a spot on the video display. Check your owner's manual for the proper BASIC words used to locate displays on the screen.

Most computers allow the use of the BASIC word LET to be optional. You probably can include it where it is shown in this book. But, you may have to add it where it is not shown.

How do you erase all of your video display at one time. The most common BASIC command to accomplish this is CLS but your computer may use PRINT CHR$(147) or CALL CLEAR or some other BASIC phrase. Check it out before using a program.

Must you include a space after a BASIC command word, before a variable or whatever follows that BASIC command? Some computers require it; some don't. Some even put the space in for you so you can forget worrying about it. Look in your BASIC manual to see how your computer handles this matter.

Does your computer have a built-in real-time clock and calendar? These often are read in a BASIC program using the words TIME or TIME$ and DATE or DATE$. If you don't have these features, see our *60-Second Timer* program for an example of a timing loop you can write.

Can your computer read a key directly from one stroke on the keyboard, without the need for you to press ENTER or RETURN? This ability usually comes with the BASIC word INKEY$ but might be some other word, such as CALL KEY. Better look in your computer's BASIC manual for the proper words before starting.

These are the major areas of potential difference in the programs in this book. Please familiarize yourself with the BASIC language, as used in your own computer, before attempting to use the programs in this book. We have made these programs straightforward and simple to use. They should be easy to modify for use in your computer.

Standalone vs. subroutine

The programs in this book may be used as portions of larger lists of instructions to your computer. They can be written in as GOTO or GOSUB objects. To do so, make appropriate changes to the first line (usually numbered 10 in this book) and to the last line of each program.

If you create a subroutine, remember that every GOSUB must have a RETURN. RETURN must be the last line of every subroutine.

If you work one of these programs into a larger set of instructions, be especially careful of your memory (variable) names or labels. They must agree with, and fit into, those you are using in the main program. Also, be careful of line numbers. No two programs can occupy the exact same set of line numbers.

By the way, if you want to load more than one of these programs into your computer at the same time, be sure to use different sets of line numbers for different programs. For example, only one line can be numbered 10. There cannot be two lines numbered 10 in the computer at the same time.

We use the words ENTER and RETURN interchangeably. Programmers today generally mix the use of the two words, to mean the same thing.

As your knowledge of BASIC and how it makes your

computer work grows, you will be able to build on these elementary programs to create ever-more-complex schemes for practical applications.

Try them all. They are great fun to run. And they are especially designed to be short so you won't have to spend hours typing any one program into your computer.

Endless running

Many of the programs in this book will continue to run until you command them off manually via the BREAK key. You may stop any run, at any time, by pressing BREAK.

REMarks

As you read through the programs in this book, you will notice very few REM, or remarks, statements. The author's training in writing BASIC-language computer programs included an emphasis on brevity and saving memory space. A sharp editing pencil was in order—and still is!

REMarks and explanations in software are out. Honing, fine tuning and waste trimming are in. Use of coding form program-writing worksheets is encouraged. Such work-sheets can be found in the publication, *Computer Program Writing Workbook,* available from ARCsoft Publishers. Your objective always should be to make the most efficient use of available memory.

Here's another important note to remember: even though they may be headed toward the same goal, no two programmers will write the exact same list of BASIC instruc-tions, or program lines, from scratch. As you load these programs into your computer, one at a time, you'll make modifications to suit your personal needs and interests if you want to. For instance, the exact wording of PRINT statements can be changed. Or two or more programs can be combined into one grand scheme. Your applications may vary.

These programs are useful in themselves. They also make good starting points for further development as you learn more and more about how to program your own com-puter. Read these programs. Type them into your com-puter. Watch them run. Analyze how the lines in the listings cause the computer to step through a sequence of opera-tions to reach a final goal. You'll see how programs are organized, how they work. You can use these fun and prac-tical programs and then, later, modify them to do more or

different work. Expand them to suit your needs as your interests grow.

Learning programming

These programs are written to be typed into your computer just as you find them here—with no extra programming needed. We assume you know how to turn on your computer and how to go about typing in a program.

Many of the programs and most of the programming advice in this book will be of interest to old hands, as well as newcomers, since we are presenting new twists and more powerful exercises aimed at making your computer do more work, more quickly.

Amidst the refreshing programs in this book, you will find countless ideas for using your computer. Each piece of software is intended to make you a more versatile programmer and make your programming chores lighter.

This is not a replacement for the owner's manual which came with your computer. You need to read it thoroughly, then use this book as a supplement.

Use this book to stimulate your thinking about how to approach various software problems and projects. Use it to get good ideas for new and different approaches to all of your programming goals. As you grow and develop as a program author, modify these programs to make your computer do even more.

Happy programming!

Chinese Zodiac

The most-famous oriental zodiac calendar is divided into twelve-year groups, each year having a different animal sign. The sign under which a person is born is believed to determine the circumstances of his life and the kind of person he is.

The animals are rat, ox, tiger, rabbit, dragon, snake, horse, sheep, monkey, cock, dog and boar.

Run this program. When asked by the computer, type in the year of your birth. The computer will find which animal sign corresponds to your birth year and present you with information concerning your own circumstances.

The computer names the animal, describes your personality traits, tells which other animal signs are compatible with your own, and tells which animal signs are your opposite.

This game goes on endlessly until you press the BREAK key to stop the run.

Secret Letter

Guess-the-number games can be great fun but they're old-hat in the world of personal computers. So we've come up with something that captures that old fun and adds a more challenging, more exciting play. This is the guess-the-secret-letter game.

The computer ponders a moment, then thinks of a letter. It knows that secret letter but it doesn't let you know. Your job is to figure it out.

It starts by displaying the full alphabet of 26 letters on its screen. You make a guess by pressing a letter key. No need to press ENTER.

The computer responds with a CORRECT or WRONG message. If wrong, it displays the entire alphabet again but this time *without* the letter or letters you have chosen previously. By the way, the tricky part is in having the computer come back and display the entire alphabet without the chosen letter or letters. This is accomplished in the subroutine in lines 700 to 810.

You will note there is a processing delay of 5 or 6 seconds so the computer sends out a wait message.

The computer uses its random-number generator to select the mystery letter. This is done by selecting an ASCII number from 65 to 90, in the subroutine at lines 500 to 520. Number 65 corresponds to the letter A and 90 to letter Z.

In playing the game, you make your selection by press-

ing a letter key, anywhere from A through Z. No need to press ENTER.

The computer keeps track of your number of attempts and tells you, after each try, how many incorrect guesses you have made. If you make a correct guess, the computer will tell you how many tries it took to get it right.

It provides an interesting afternoon's diversion, consuming many hours of fun. The game plays continuously until you press the BREAK key.

Shell Game

Hey, Man! Here's a great new game which can only be played on a powerful computer such as yours.

The dark squares on the display screen are cups. Under one is a letter P, representing a pea. But which cup covers the pea? You guess by pressing the appropriate number key, either 1, 2 or 3. No need to press ENTER. The computer shuffles its cups after each guess.

Upon first starting this program, the computer will display a menu asking you to select an option. Press R to read the rules. Press P to play the game. Press Q to quit or end the game. You can return to the main menu at any time by pressing the ESCape key.

The number of right and wrong guesses is shown on the screen. See how much you can win in 10 minutes of play. Then see how much your friends can win in the same length of time. Or you can compete by number of games played. Or play solitaire by yourself. The object is to locate the pea! It may or may not move after each guess, depending upon the secret decision of the computer. Go for it!

Backward Writer

Type in a message of up to 85 characters in response to the computer's request. The computer will turn your message around and print it backwards on the display

The 85 characters includes letters, numbers, symbols and spaces. You may use any combination. For a test, try it with the 26 letters of the alphabet as we have done in our SAMPLE RUN below. Type Z to A in backwards order. You will be amazed at the speed with which your computer turns it around!

High Ball

No excitement at the office water cooler? Bored in study hall? Nothing to do on a rainy Saturday at home?

28

Here's a fast game of Highball in which the highest-scoring player wins.

The game is built for five players. You type in the first name, or initials or other identifying label, for each of the five players. The computer draws straws and randomly assigns numbers to each player. It sorts to find which player has the *highest* number and declares that player the winner.

The number of players is controlled by the FOR/NEXT loop in lines 105 to 180. Change the number 5 at the end of line 105 to change the number of players.

This is an ideal bit of speedy entertainment. The game runs endlessly until you press BREAK to stop it.

Program Listing

```

Computer Guesses Your Secret Number

Wow! Everybody has heard of the high/low game in which a computer selects a secret number and you try to guess it. But, what if *you* think up the secret number and the computer tries to guess it?

When you run this program, think of a secret number from one to 63. The computer will ask some easy questions and then guess your secret number every time!

To ask its questions, the computer displays sets of various numbers. It does this six times. Each time you tell it nothing more than whether or not your secret number is in the set of numbers shown on the display. You tell it this simply by pressing Y for yes or N for no.

After its sixth query, it will correctly tell you what the mystery number was. Naturally, you can't change the mystery number after the start of the game and you must tell the computer truthful answers to each of the six questions.

At the start of a RUN, the computer will ask for your name. You give it and then read an opening explanation billboard on the display screen. Then press ENTER to start. At completion of a game, press ENTER to play a new game. The program runs on endlessly until you stop it by pressing the BREAK key.

Guess The Letter

We always did say what list of programs would be complete without our old friend, the Hi-Lo Game. Well, it would be less than interesting to do a simple old Hi-Lo so let's try something a bit more challenging.

This is a guess-the-letter game. The computer will display the full alphabet and asks that you guess a secret letter being held by the computer.

The computer reports WRONG or CORRECT in reply to your guess. If WRONG it then displays several letters, including the mystery letter. It allows you six tries to get the right letter.

The program offers BEEP sound cues. You enter the letter Y or the letter N in answer to the question of whether or not you want to play another game. The computer reports your number of tries as a score.

Program Listing

```
10 CLEAR:DIM A$(Ø)*26:DIM LT$(Ø)*26
20 A$(Ø)="ABCDEFGHIJKLMNOPQRSTUVWXYZ"

Coasters

Coasters is a mixture of chance and common sense. It can be a gambling object when played with others, yet it is great fun when played alone. Two persons usually play but in this computer version, you play alone against the computer.

To play this game in a bar, you need nine coasters. Or identical squares of paper. The nine coasters are numbered 1 to 9 on one side and then turned over, numbered side down. The coasters are thoroughly shuffled and then lined up in a row.

The player chooses a coaster and turns it over. The first coaster chosen can be any one of the nine in any position. The number on the coaster is read.

From this point on, the number on the coaster determines which coaster next will be selected. Suppose on the first turn-over, the fourth coaster from the right was chosen and it revealed the number 3. On his next move, the player must take the third coaster in from *either* end of the row.

When the player makes his second move, his third move will be determined by the number on the second coaster. The number corresponds to the count of coasters in from *either* end of the row. And so on.

The player continues until no further moves are possible. The numbers on the coasters which remain are added up to give the player his score. The object is to obtain the lowest score. Ideally, you want to eliminate all of the coasters so you will have a score of zero.

Many players can take turns. The person with the lowest score at the end of a round of all players is the winner of that round. The winner of the most rounds is the winner for the day.

To play the game on your computer, start the program RUN. The computer will display the game name, COASTERS. While this display is going on, the computer is shuffling the nine coasters into random order.

Next, the computer will display nine solid coasters with their numbers hidden behind, out of sight. To make your play, press the number key of your choice, 1 through 9, on the keyboard. No need to press ENTER. The number you press will be for the position in the row of nine coasters.

The first number you select is your only totally-free choice. From then on, you must use the latest number from the last-revealed coaster to determine the position of your next move. The new move can be from either the right end or the left end of the row of nine coasters.

For instance, suppose the last coaster you revealed had the number 8. You may turn over coaster position 2 or position 8, so long as the one you wish hasn't been turned over already. If it has, you must select the other. If it also

■ ■ ■ ■ ■ ■ ■ ■ ■

■ ■ ■ ■ 8 ■ ■ ■ ■

has, then the game ends since you can't move any more. Add the remaining numbers to get your score by pressing the letter S on the keyboard. No need to press ENTER.

Pressing S reveals your score. Your lowest score of the day is your best game. If more than one person is playing, lowest score wins.

After reading the score, press any keyboard key to start a new game.

Blues

This is a quiz game. Each answer in this quiz is a word, name or familiar phrase containing the word blue.

It's lots of fun and, after you have all of ours memorized, you easily can substitute other "blues" for the 19 we have here.

Be sure to observe quote marks, commas, spellings and spaces in DATA lines.

To change the quantity of blues, add DATA lines and change the number 19 in the FOR/NEXT loop in line 290. Also change the number 19 in the line 420 PRINT statement.

The program totals correct and incorrect answers and reports the numbers of rights and wrongs after you have been tested on all 19 blues.

The length of times of displays of the various messages can be changed by altering the numbers in the WAIT statements in lines 200, 240, 300, 350 and 400. The BASIC word RESTORE must be in the program as we have it in line 520.

After the end of a game, press any key to start over. This is an interesting trivia game which can be educational!

```

Horoscope

This fun program will entertain your family and friends for hours. It makes a great party game, too.

The player, or user, talks with the computer, giving his name, month of birth and date of birth. The computer then tells the player his sign of the zodiac and what it means. The computer describes the player's personality and predicts the player's future.

If you find the program a bit long to type in, shorten it by using the sign-of-the-zodiac response only. For instance, between lines 700 and 790 you could delete 710 and 750 or 720 to 750. That would make the program shorter and easier to type in, but without most of the exciting description.

Poetrywriter™

Well, we said it could do *anything*! All you have to do is explain to your computer about adjectives, nouns, verbs and adverbs. Give it a nice little vocabulary. And off it goes, writing poetry.

The vocabulary is held as DATA in lines 20 to 200. The relationship of the words in each of those program lines is important if you want the computer to make sense with proper syntax.

Each DATA line has seven items (after the BASIC word DATA). The seventh "word" actually is a phrase as we use it but is treated as one unit. The seven items are separated by commas.

We use the first English word in the DATA line for transitions. The second and third English words are adjectives.

The fourth word is a plural noun. The fifth word is a verb. The sixth word is an adverb. And the seventh item is a colorful phrase. It could just as well be a single word.

The computer randomly selects one of each of the seven types of English words and puts them together to form sentences.

Random number generators are in lines 300, 400, 500, 600, 700, 800, and 900. Punctuation and print-out order is

determined in lines 1000 to 1100.

The computer will write poems all day until you press its BREAK key.

Super Slot-0

Like any good slot machine, when you pull the handle it displays some objects. If you get no two alike, you lose. If you get two alike among the three objects, you win small. If all three are the same, you win big.

To simulate pulling the slot machine's lever arm, press the ENTER key on the keyboard.

One difference in our Slot-O game, the display is entirely at random. No one pushes a secret button under the table to make certain items pop up.

Get out your funny-money from that old Monopoly game, gather up your friends, and let's have some fun.

Program Listing

Draw Straws

Here's one of man's oldest decision makers. Several straws are broken off to the same length except for one

extra-short straw. The length of all straws is concealed and each person draws a straw. The person drawing the shortest straw "wins." That is, he is selected by the luck of the draw.

Now, your computer can provide a fast and easy drawing where no straws are available. It does all the work for you by assigning electronic straws randomly to each person. Those straws are numbers. The shortest straw, or lowest number, "wins."

Funny similes

Give these newfangled gadgets an inch and they'll take a mile. In the case of the computer, give it some tacky retorts and it will spew out an endless string of dumb remarks.

The fun is in having the computer randomly select various words and combine them to make silly sayings.

The random number is used to match the words into similes.

Program Listing

Traditional Dice Roll

Here's a simple, brief way to roll and display results for two dice.

Lines 100-110 get a random number between 1 and 6 and store it in A. Lines 200-210 get another random number from 1 to 6 and store it in B.

Lines 300-310 print the contents of A and B along with a suitable message.

Program Listing

```
10 RANDOMIZE
20 CALL CLEAR
100 A=INT(7*RND)
110 IF A<1 THEN 100
200 B=INT(7*RND)
210 IF B<1 THEN 200
300 PRINT "FIRST DICE:",A
310 PRINT "SECOND DICE:",B
400 FOR L=1 TO 10
410 PRINT
420 NEXT L
430 PRINT "TO ROLL DICE AGAIN,"
440 INPUT "PRESS ENTER ":KY$
450 GOTO 20
```

See Two Dice

This program rolls two dice and lets you see the results, as with real dice. This is especially useful in those games where it is important to see the value of each.

The subroutine in lines 100-140 generates the necessary pair of random numbers. Lines 60, 70 and 80 make the display you want.

Note that lines 60 and 80 each have nine asterisks. Line 140 is RETURN and must be the last line in the program.

After you type in and RUN the program, press ENTER on your computer's keyboard to roll the dice.

Program Listing

```
10 RANDOMIZE
15 CALL CLEAR
20 PRINT "TO ROLL TWO DICE,"
30 INPUT "PRESS ENTER":KY$
40 PRINT
50 GOSUB 100
```

```
60 PRINT "************"
70 PRINT "* ";DL;" * ";DR;" *"
80 PRINT "************"
90 PRINT
95 GOTO 20
100 DL=INT(7*RND)
110 IF DL<1 THEN 100
120 DR=INT(7*RND)
130 IF DR<1 THEN 120
140 RETURN
```

See Four Dice

Two dice not enough for your game? Here's how to see four dice after a roll!

Naturally, this program works just like the other program except that the FOR/NEXT loop in lines 50-140 makes the computer roll and display four times rather than two times. If you need six, eight or ten dice on display, change the number two in line 50 to three, four or five.

Program Listing

```
10 RANDOMIZE
15 CALL CLEAR
20 PRINT "TO ROLL TWO DICE,"
30 INPUT "PRESS ENTER":KY$
40 CALL CLEAR
50 FOR L=1 TO 2
60 DQ=INT(7*RND)
70 IF DQ<1 THEN 60
80 DR=INT(7*RND)
90 IF DR<1 THEN 80
100 PRINT "************"
110 PRINT "* ";DQ;" * ";DR;" *"
120 PRINT "************"
130 PRINT
140 NEXT L
150 PRINT
160 PRINT
170 GOTO 20
```

Secret Message

Secret messages can be lots of fun! They often are composed of codes in which letters of the alphabet have been replaced by numbers.

In this easy-to-use program, the computer generates a list of pseudorandom numbers and assigns one number to each letter of the alphabet. You use the numbers, in lieu of letters, to write notes to your friends.

There is very little chance of the same number being assigned to two different letters because available numbers range from zero to 999.

When typing this program into your computer, be sure to separate the alphabet letters with commas in line 100.

By the way, note the nice two-column screen printing format! Line 250 does that.

Program Listing

```
10 RANDOMIZE
20 CALL CLEAR
100 DATA A,B,C,D,E,F,G,H,I,J,K,L,M
110 DATA N,O,P,Q,R,S,T,U,V,W,X,Y,Z
200 FOR N=1 TO 13
210 C=INT(1000*RND)
220 READ L$
230 D=INT(1000*RND)
240 READ J$
250 PRINT L$;" ";C,J$;" ";D
260 NEXT N
```

Original Hi/Lo Game

Here it is. Where everybody started in microcomputer programming back in the Seventies. The first game ever played was a high-low guess-the-number routine.

The computer selects a secret number. You try to guess it. The computer tells you whether or not you are too high, too low, or right on the number.

Here's how it works: the secret number can be zero to 1000. Line 100 generates a random number (the secret number) and stores it. Line 200 asks you to guess the number.

Lines 300-310 decide if you are right or wrong. Line 220 keeps track of the number of attempts.

Program Listing

```
10 RANDOMIZE
20 CALL CLEAR
30 T=0
100 R=INT(1001*RND)
200 INPUT "GUESS THE NUMBER ":B
210 PRINT
220 T=T+1
230 PRINT "THAT WAS TRY NUMBER ";T
300 IF B>R THEN 350
310 IF B<R THEN 330
320 GOTO 400
330 PRINT "TOO LOW"
340 GOTO 360
350 PRINT "TOO HIGH"
360 INPUT "GUESS AGAIN ":B
370 GOTO 210
400 CALL SOUND(99,440,1)
410 PRINT "YES, YOU GOT IT !"
420 PRINT R;" IS THE NUMBER"
430 PRINT "YOU GOT IT IN ";T;" TRIES"
440 PRINT
450 PRINT
460 PRINT
470 GOTO 30
```

Manual Box Mover

The computer can be made to take your message (of up to 34 characters and spaces) and center that message, and draw a box around it to highlight it.

Line 10 asks for a word or words of up to 34 total characters and spaces. Lines 30-80 draw a box around it. Line 100 positions it at the bottom of the video screen. Lines 110 to 130 display it, in its box.

At this point the computer waits for you to press any key (line 200). When you press a key on the keyboard, the program progresses to line 210. The entire message box is pushed *up* one line.

Each key press pushes the box up one more line. Imagination!

Program Listing

```
10 HOME
20 INPUT"MESSAGE TO BE BOXED ";M$
30 LM=LEN(M$)
40 LT=LM+4
50 FOR L=1 TO LT
60 AS$=AS$+"*"
70 NEXT L
80 P=(40-LT)/2
90 HOME
100 FOR L=1 TO 20:PRINT:NEXT L
110 PRINT TAB(P) AS$
120 PRINT TAB(P) "* ";M$;" *"
200 GET KY$
210 CALL -912
220 GOTO 200
```

Backward Writer II

Type in any message of up to 26 characters in response to the computer's request. The computer will turn your message around and print it backwards on the display screen.

Program Listing

```
10 DIM X$(26)*26:DIM A$(Ø)*26
   :DIM Z$(Ø)* 26
20 INPUT "TYPE A MESSAGE",A$(Ø)
30 L=LEN A$(Ø)
40 FOR J=L+1 TO 1 STEP -1
50 Z$(Ø)=Z$(Ø)+MID$ (A$(Ø),J,1)
60 NEXT J
70 PRINT Z$(Ø)
80 CLEAR:GOTO 10
```

56

Secret Message: Backward Writer

Again type in any message of up to 26 characters (including spaces, of course). You may use any combination of letters, numbers, symbols and spaces up to a total of 26.

The computer will reverse it and display it. Try it with the alphabet. Type in Z to A in backwards order.

Program Listing

```
 10 CLEAR:DIM A$(Ø)*26:DIM B$(Ø)*26
 20 INPUT "TYPE 26-CHARACTER MESSAGE"
    ,A$(Ø)
 30 IF A$(Ø)="" THEN GOTO 20
 40 L=LEN (A$(Ø))
 50 FOR J=L TO 1 STEP -1
 60 B$(Ø)=B$(Ø)+MID$ (A$(Ø),J,1)
 70 NEXT J
 80 PAUSE B$(Ø)
 90 IF INKEY$="" THEN GOTO 90
100 GOTO 10
```

Print Character Set

If you have misplaced the character set, here's a way to see it all on paper. This program causes the computer to run through its list and print numbers, symbols, upper-case alphabet and lower-case alphabet.

Program Listing

```
 10 CLS:CLEAR:DIM C$(Ø)*47:DIM D$(Ø)*47
 20 FOR L=33 TO 80
 30 C$(Ø)=C$(Ø)+CHR$ L
 40 NEXT L
 50 FOR L=81 TO 127
 60 D$(Ø)=D$(Ø)+CHR$ L
 70 NEXT L
 80 LPRINT C$(Ø);D$(Ø)
```

Memory Tester II

Suppose I pick a number out of the air. Say, 5. You
can remember that, right? Or 73. Or 841. But, just how big

a number can you see briefly and remember? This program throws ever-increasingly-larger random numbers at you and asks you to remember them. And it keeps score. What's your memory's upper limit?

Program Listing

```
 10 LET W=0
 15 LET R=0
 20 LET Z=1
 30 LET S=INT(100*RND)
 40 LET N=INT(S*Z)
 60 PRINT "REMEMBER ";N
 65 PAUSE 100
 70 CLS
 80 IF W=3 THEN PRINT "FORGET IT"
 85 IF W=3 THEN GOTO 145
 90 PRINT "WHAT WAS IT ?"
 95 INPUT S
100 IF S<>N THEN PRINT "WRONG"
105 IF S<>N THEN LET W=W+1
110 IF S<>N THEN GOTO 80
115 PRINT "RIGHT"
120 LET R=R+1

135 PRINT R;" RIGHT SO FAR"
140 GOTO 30
145 PRINT "YOU HAD ";R;" RIGHT"
150 PRINT "LETS START OVER"
155 GOTO 10
```

Smart Computer

This game is so quick you can work it in while your secretary is away sharpening her pencil. It's more or less the reverse of the old favorite High-Low Number bit. In this rendition, you come up with the secret three-digit number and the computer guesses it!

In old-fashioned High-Low, the computer could keep you guessing for hours. Here, the computer asks one lit-

tle old question and...*bingo!* It has the correct answer in an instant.

The mystery number has to be a three-digit number with all digits the same.

Program Listing

```
10 CLS
20 PRINT "SELECT A THREE-DIGIT NUMBER"
30 PRINT "WITH ALL THREE DIGITS THE
   SAME"
40 PRINT
50 PRINT "ADD THE THREE DIGITS TOGETHER"
60 PRINT "WHAT IS THE SUM"
65 PRINT "OF THE THREE DIGITS ?"
70 INPUT N
75 CLS
80 LET Q=37*N
90 PRINT
100 PRINT "YOUR ORIGINAL NUMBER WAS ";Q
110 PRINT
120 PRINT
130 GOTO 20
```

Parameters

What! Another high-low numbers game? Yep. It's the all-time most favorite computer game.

Any rules? Sure. The computer picks a secret number. You try to guess it. The computer gives you too-high or too-low clues and keeps score.

Program Listing

```
10 RAND
20 LET T=0
30 LET R=INT (101*RND)
40 IF R<1 OR R>100 THEN GOTO 20
50 PRINT "GUESS MY SECRET NUMBER","(1
   TO 100)"
60 INPUT B

220 PRINT "GUESS AGAIN"
230 GOTO 60
300 CLS
310 PRINT B;" IS TOO LOW"
320 GOTO 220
```

Wood Chuck Chuck

How much wood would a woodchuck chuck, if a woodchuck could chuck wood. How much wood could a woodchuck chuck, if a woodchuck would chuck wood? That's like asking how many angels can sit on the head of a pin. Or, more appropriately, how many trees in the forest.

But, wait. This little game takes that old ditty seriously. How much wood could Mr. Chuck throw around if he wanted to? Try it. If you're good enough, you'll end up in the Woodchuck Hall of Fame.

Murder In the Mansion

The wind howls around gnarled tree trunks and through heather across the moor. A dog barks in the distance. Inside the stately Victorian mansion, the upstairs maid weeps noisily into her handkerchief. The Baron has just been found dead in a pool of blood.

As Scotland Yard's chief inspector for the district, you've just been called in on the case. Besides the Pretty Maid, you find a motley cast of characters including the Stately Butler and the Old Nanny.

The case is perplexing. You're not sure how the old boy was done in, or even where he actually was killed. The identity of the killer is not immediately apparent.

The first major decision comes as you sort through the clues, trying to deduce where the Baron was killed. Satisfying that one, you search for the weapon. Once you know where and how he was murdered, the only remaining question is: Whodunit?

Buried Treasure

The sun burns the beach sand as it glares across mirrored depths. An old salt, one leg gone below the knee, stumps down to the water's edge and glares back. A parrot chatters on his shoulder. The old man tosses a bottle into the ocean.

Hours later you awaken to find the tide moistening your toes and the bottle bumping against your leg. It's got paper inside.

Pulling the cork you find a map. A treasure map! The scrawl shows a quiet Cay with a peaceful finger of land

extending into the sea. On the map is a giant X, marking the spot where the treasure is buried. Then, the only remaining question is: Where?

Old West Shootout

You are Marshall Matt Dillon. Billy the Kid is in town. You can't avoid your duty: the kid must be arrested. It's high noon!

You must plug the gunfighter before he guns you down. But where is he hiding? He could be down in the corral or up on the hotel roof. He might have slipped into the stable or down behind the bar in the saloon. He could be inside the house or outside in the wagon. He might be behind the railroad station or in the doctor's office. And, worst of all, he may have brought a friend!

Follow the clues from your handy computer, fastest figurer in the West. Just don't stop any bullets.

Lost Safari

Jim Buck, the famous safari guide, has been deep in the bush of darkest Africa, leading a party of big game hunters for days when word arrives at his London headquarters that he is lost. The telegram doesn't say what country on the African continent he is in. Nor does it tell what big game he is hunting. You'll have to apply your best deductive reasoning and come up with his prey and his location if you are to save his life and the lives of three men and two women on safari with Big Jim.

But the jungle is full of traps. Once you have discovered which animal he is hunting you'll know whether he is up-country or down-country or in the back country. But the jungle is full of traps. Having settled all that, it's still not clear whether you can fly in, in time to save the party from certain death at the hands of a tribe of giant pygmies. If only you can fly in in the right number of days, all will be saved. Hurry!

The Black Pearl

Loves have been lost for it. Families have been broken by it. Men have killed for it: the infamous Black Pearl from Won Quon Luk temple in the Orient.

One night in 1946, in a fabulous apartment high above Fifth Avenue in New York City, a svelte blonde in black velvet wore a string of 10 superb pearls. At least, nine superb and one ultimate. Nine whites and the black beauty!

The string broke during a lights-out-at-midnight and were lost. Until now, their whereabouts has been a mystery. Until now, that is, because here they are in this leather pouch. Reach in. Take one. Hope you get the Black Pearl!

Saturn Death

Lights are dimmed to a dull red on the flight deck of the USS Intrepid. Men in your command chatter quietly as their handheld terminal boxes twinkle with vital data. The forward view screen has been showing gigantic Saturn as a tiny ball for days. Now the planet is a giant balloon with the Sun receding from the starboard screens.

Despite the ever-imminent danger in the hostile environment of space, the trip out from Earth Command has been uneventful. Suddenly, the red bullseye flashes

on your terminal box. The console under your left elbow brightens and a low buzz emits from its loudspeaker. The ship's main computer sounds an alarm. Life-threatening danger is approaching rapidly. With only seconds to spare, it's you and the computer against the challenge of your life. Death in the frozen void of space lurks nearby.

Mystery Clues

Want to create your own murder mystery? Figure out whodunit and write your program backwards from there. When your players make wrong guesses, give them tantalizing clues.

Here's a short program which you can load into your computer in a matter of minutes. Key it in and try it out. It shows how you can add clues to your mysteries.

For simplicity, we assume here the Butler did it. Note that, in line 20, we are making him equal to X$. At line 30, the computer stops to ask you whom you think did it. Your answer is recorded in A$.

In line 40, your answer, lodged in A$, is compared with the computer's already-certain knowledge that the Butler did it. A$ is compared with X$. If they agree, and only if they agree, the computer displays the message, "You guessed it." If you got it right, things will end right there.

If, however, you missed it, program execution (sorry about using that word in a murder mystery!) drops to line 50 where we hear the computer, "Clue: servant." After deftly dropping that clue, the computer moves back to line 10 and runs through the whole affair another time. It will keep running through it until you answer, "Butler," in response to its question in line 30.

Program Listing

```
10 CLS
20 LET X$="BUTLER"
30 PRINT "WHODUNIT ?"
35 INPUT A$
40 IF X$=A$ THEN GOTO 100
45 CLS
50 PRINT "CLUE: SERVANT"
60 FOR T=1 TO 100
70 NEXT T
80 GOTO 10
100 PRINT "YOU GUESSED IT: BUTLER"
110 PRINT "PRESS ANY KEY TO PLAY AGAIN"
120 IF INKEY$="" THEN GOTO 120
130 GOTO 10
```

Code Groups

Need some secret codes for your latest sensitive mission? How about sets of five random letters for use in Morse code practice?

This program has the computer generate an endless string of random combinations of five letters. It won't stop until you press the BREAK key.

Program Listing

```
 10 RAND
 20 LET A$="ABCDEFGHIJKLMNOPQRSTUVWXYZ"
 30 FOR L=1 TO 5
 40 LET R=INT(100*RND)
 50 IF R<1 OR R>26 THEN GOTO 40
 60 PRINT A$(R);
 70 NEXT L
 80 PRINT
 90 SCROLL
100 GOTO 30
```

Keeping Game Scores

Writing a computer football game? Spelling bee? Cave adventure? No matter what kind of fun you are preparing, you'll need a way to keep score. Here's how.

The wealthy English duke has just been killed in our little mystery game.   In lines 10 through 160 of our program listing, below, you play the game, attempting to find out whodunit.

The trick here is in the scorekeeping. Note line 170. If you guessed correctly in response to the query in line 160, at line 170 the computer will give you credit by adding one point to your score stored in memory location R. It does that by comparing your line 160 answer stored in P$ with the correct answer stored in A$.

If you blew it and guessed wrong, the program drops below line 170 to line 180 where it increases your "wrong score" by adding one point to W.

If you got a W+1 at line 190, the program moves back to line 120 and gets you to try again. If you scored a victory

and got an R+1 at line 170, the program jumps to line 200 where it stops to display your total right and wrong score. After that, it's back to line 10 for a complete new run-through.

Program Listing

```
 10 CLEAR
 15 LET W=Ø
 20 LET R=Ø
 25 DIM A$(6,7)
 30 DIM P$(7)
 35 LET S=INT(10*RND)
 40 IF S<1 OR S>6 THEN GOTO 30
 60 LET A$(1)="BUTLER"
 70 LET A$(2)="NANNY"
 80 LET A$(3)="MAID"
 90 LET A$(4)="SON"
100 LET A$(5)="COACH"
110 LET A$(6)="WIFE"
120 PRINT "WHO KILLED THE DUKE?"
130 PRINT "WAS IT THE..."
140 FOR L=1 TO 6
145 PRINT A$(L)
150 NEXT L
160 INPUT P$
165 CLS
170 IF A$(S)=P$ THEN GOTO 200
180 PRINT "NOT ";P$
190 LET W=W+1
195 GOTO 120
200 LET R=R+1
210 PRINT P$;" DID IT"
220 PRINT "YOUR SCORE IS..."
230 PRINT R;" RIGHT ";W;" WRONG"
240 PRINT
250 GOTO 10
```

Batting Average

Once you know the number of times you were right and wrong in a game, as in the previous program, it's fun to

convert those raw numbers to a batting average. Numbers right and numbers wrong take on a new meaning when changed to a batting average. Folks seem to be able to understand a batting average better.

Our program, starting at line 900, is a partial listing designed to be tacked onto the end of your longer game program to display the final results of play. It will show the number of tries, number of right answers, percentage right, and batting average.

You'll want to test load this program so add lines 10 and 800 as shown. Line 800 will give you the R and T values you'll need going into the program at line 900.

Program Listing

```
 10 CLS
800 LET R=55
810 LET T=100
900 PRINT R;" RIGHT"
910 PRINT "IN ";T;" TRIES"
920 LET D=R/T
930 LET P=100*D
940 LET B=10*P
950 PRINT "THAT IS ";P;" PERCENT"
960 PRINT "BATTING ";B
```

Computer Rating Service

Of course, once you know a player's batting average it still might need some interpretation. In this program, the computer takes a look at a batting average and makes a comment.

Remember that this listing, starting here with line 800, is a partial program to be tacked on the end of a longer game. Note that, at 800, you already have values for G (number right) and E (number of tries). Line 810 converts those raw numbers to a batting average (H).

Then, the computer takes that batting average, stored in H, and compares it with values shown in lines 830 to 870. Depending upon the value of H, a slogan is selected by a jump to one of the lines 880 to 950.

By the way, check line 880. You'll see a special

epitaph for players with batting averages above 900.

Program Listing

```
 10 CLS
700 LET G=55
710 LET E=100
800 PRINT "YOU GOT ";G;" RIGHT IN "
    ;E;" TRIES"
810 LET H=INT(1000*(G/E))
820 PRINT "BATTING ";H
825 PRINT "YOU ARE..."
830 IF H<100 THEN GOTO 910
840 IF H<300 THEN GOTO 920
850 IF H<500 THEN GOTO 930
860 IF H<700 THEN GOTO 940
870 IF H<900 THEN GOTO 950
880 PRINT "QUALIFIED FOR THE HALL OF FAME"
890 GOTO 960
910 PRINT "VERY NEAR THE BOTTOM OF THE
    BARREL"
915 GOTO 960
920 PRINT "POOR"
925 GOTO 960
930 PRINT "AVERAGE"
940 PRINT "TOP NOTCH"
945 GOTO 960
950 PRINT "DAMN NEAR PERFECT"
960 PRINT "YOUR BATTING AVERAGE IS ";H
```

Box Score

To dress up scores during and at the end of a game program, use this method of putting those scores in a box. The box around the score will highlight it and jazz up your video display.

The program here has a temporary substitute for lines 10-40. Normally, you would obtain player's name and score from some larger game program you already have on hand, or are writing. Line 20 gets from you a name and stores it in N$. Line 30 gets a score and stores it in S. If lines 50-230 were a subroutine to a larger program, you would need a RETURN at line 110.

Program Listing

```
 10 DIM A$(10)
 20 PRINT "PLAYERS NAME ?"
 25 INPUT N$
 30 PRINT "PLAYERS SCORE ?"
 35 INPUT S
 40 CLS
 50 LET S$=STR$(S)
 60 LET L=LEN(N$)+LEN(S$)
 70 LET T=L+13
 80 GOSUB 200
 85 PRINT
 90 PRINT "* ";N$;"S SCORE: ";S$;" *"
100 GOSUB 200
110 PRINT
120 PRINT
130 GOTO 20
200 FOR L=1 TO T
210 PRINT "*";
220 NEXT L
230 RETURN
```

Create a Quiz

Quiz data—the computer's storehouse of know-ledge—is in lines 100 to 140. Be careful, when you type them in. Spelling and spacing must be exact.

Of course, the quiz can be made much longer. In this example, it could be expanded to encompass all past U.S. presidents.

Program Listing

```
 10 RAND
 20 DIM P$(5,10)
100 LET P$(1)="WASHINGTON"
110 LET P$(2)="ADAMS"
120 LET P$(3)="JEFFERSON"
130 LET P$(4)="MADISON"
140 LET P$(5)="MONROE"
200 LET R=INT(6*RND)
```

```
210 IF R<1 THEN GOTO 200
300 PRINT "WHO WAS PRESIDENT NO. ";R
310 PRINT "OF THE UNITED STATES ?"
320 INPUT A$
330 IF A$="" THEN GOTO 320
340 LET L=LEN A$
350 CLS
360 IF A$=P$(R,1 TO L) THEN GOTO 500
400 PRINT "WRONG"
410 GOTO 510
500 PRINT "CORRECT"
510 PRINT P$(R);" WAS PRESIDENT"
520 PRINT "NUMBER ";R
530 PRINT
540 GOTO 10
```

Killing Time

Sometimes, it may seem to you as if the computer will never get to the result of a job. You understand the processing delay but your non-computer friends may not. They could be confused by the wait and think the computer is "broken."

To keep their minds off the slowness, give them something to look at while the computer is "thinking."

The added, extra lines, numbered 60 and 70, take up more processing time but make for less confusion. Computing may take a bit longer but your fun will be increased.

If you delete lines 60-70 you'll see how the program runs faster but the blank screen is confusing.

Program Listing

```
10 LET X=Ø
20 PRINT "GIVE ME A NUMBER"
30 INPUT N
40 FOR L=1 TO N
50 LET X=X+L
60 CLS
70 PRINT "I AM THINKING"
80 NEXT L
90 CLS
```

```
100 PRINT "I HAVE THE ANSWER"
110 PRINT "THE TOTAL OF ALL NUMBERS"
120 PRINT "FROM 1 TO ";N;" IS ";X
130 PRINT
140 GOTO 10
```

Gee Whiz I: Smart Adder

These six programs, in this section of the book, make up our *Gee Whiz* series. One of the fun ways to use your computer is in wowing your friends. Next time they ask, "But, what can it do?", show them its uncanny abilities at adding, spelling, writing upside down, even cracking jokes. Try these six *Gee Whiz* programs on your friends. You'll love their reactions.

Smart Adder is the first in the series. When your neighbor drops in for a cup of coffee, bring out the computer for a demonstration of its lightning speed.

This program adds long strings of numbers in a flash. You give the computer a number. It starts at 1 and adds all numbers up to and including your number. For instance, if you give it a five, it will add 1 plus 2 plus 3 plus 4 plus 5 and display the result.

Ask your neighbor how fast he or she can add all the numbers to 100. It should take several minutes. While he's working on it, let your computer do it in a split second. Your neighbor's reaction is bound to be, "Gee whiz!"

Program Listing

```
10 PRINT CHR$(147)
20 INPUT"GIVE ME A NUMBER";N
30 IF N<1 THEN 20
40 FOR L=1 TO N:X=X+L:NEXT L
50 PRINT:PRINT"THE TOTAL OF"
60 PRINT"ALL NUMBERS"
70 PRINT"FROM 1 TO";N
80 PRINT"IS";X
90 PRINT:PRINT:PRINT:PRINT
100 CLR:GOTO 20
```

Gee Whiz II: Three-Digit Mystery

Have your neighbor secretly select any three-digit number in which all three digits are the same. Then have him tell the computer only the *sum* of those three digits.

The computer will identify his secret number!

Program Listing

```
10 PRINT CHR$(147)
20 PRINT"SELECT A"
30 PRINT"THREE-DIGIT NUMBER"
40 PRINT"WITH ALL THREE"
50 PRINT"DIGITS THE SAME."
60 PRINT
70 PRINT"ADD THE THREE"
80 PRINT"DIGITS TOGETHER"
90 PRINT
100 PRINT"WHAT IS THE SUM OF"
110 INPUT"THE THREE DIGITS";N
120 IF N<3 OR N>27 THEN 100
130 Q=37*N
140 PRINT:PRINT
150 PRINT"YOUR NUMBER IS";Q
160 FOR L=1 TO 7:PRINT:NEXT L
170 CLR:GOTO 20
```

Gee Whiz III: Up, Down, Back, Forth

"Good golly, what can't it do?", will be the question from your surprised neighbor when you show him this neat trick.

You type in any word. The computer instantly prints it on the video display, both up and down vertically, and backward and forward horizontally. It's great to show how smart your computer is when it comes to spelling!

Program Listing

```
10 HOME
```

```
 20 DIM X$(100)
 30 INPUT"GIVE ME A WORD   ";A$
 40 L=LEN(A$)
 50 FOR J=1 TO L+1
 60 X$(J)=MID$(A$,J,1)
 70 NEXT J

150 Z$=Z$+MID$(A$,J,1)
160 NEXT J
170 PRINT:PRINT "BACKWARD:"
180 PRINT Z$
190 PRINT:PRINT:CLEAR:GOTO 20
```

Gee Whiz IV: First Alphabet Spotter

There are 26 letters in the alphabet. Each has a number. For instance, number 1 is A. Number 20 is T. This *Gee Whiz* program has the computer ask you for a number from 1 to 26 and then, faster than a jackrabbit, tell you what letter it goes with.

Naturally, you'll know how it works but to your non-computer friends it will   seem like the   computer   is a genius!

Program Listing

```
10 PRINT CHR$(147)
20 PRINT"GIVE ME THE NUMBER"
30 PRINT"OF A LETTER"
40 PRINT"FROM THE ALPHABET"
50 INPUT"FROM 1 TO 26";N
55 IF N<1 OR N>26 THEN 50
60 X=N+64
70 PRINT:PRINT:PRINT
```

```
80 PRINT"LETTER NUMBER";N;"IS ";CHR$(X)
90 FOR L=1 TO 7:PRINT:NEXT L
100 GOTO 20
```

Gee Whiz V: Second Alphabet Spotter

This is a variation on the previous program. This *Gee Whiz* program has the computer ask you for a number from 1 to 26 and then, faster than a jackrabbit, tell you what letter it goes with.

Program Listing

```
10 PRINT CHR$(147)
20 PRINT"GIVE ME THE NUMBER"
30 PRINT"OF A LETTER"
40 PRINT"FROM THE ALPHABET"
50 INPUT"FROM 1 TO 26";N
60 IF N<1 OR N>26 THEN 50
70 FOR L=1 TO N
80 READ A$
90 NEXT L
100 PRINT:PRINT:PRINT
110 PRINT"LETTER NUMBER";N;"IS ";A$
200 FOR L=1 TO 7:PRINT:NEXT L

Photography
Exposure with Filters

Serious photographers, amateurs and pros, carry an
assortment of lens filters in their bags. Lens filters absorb

light so cameramen must make exposure corrections when using filters.

The *filter factor* is used in making that correction. The photographer sets the exposure meter for the speed of the film in use without a filter. Then, he modifies the camera settings indicated by the meter.

For example, suppose the filter factor is 2 and the camera setting indicated by the light meter is 1/125 second at f/11. The photographer opens the lens by one full f/stop to f/8.

This computer program displays the proper f/stop correction when a filter factor is known, or the proper filter factor for a particular f/stop correction.

Program Listing

```

Photography: Close Ups

For copying and other close-up work with your camera, you extend the camera lens by using bellows or extension tubes. In doing that, you must allow for an effective increase in the normal *f*/number or your picture will be underexposed.

You make such an exposure compensation whenever the subject distance is less than eight times the focal length of your lens.

This program provides a convenient means of determining the effective *f*/number. For example, if the focal length of your camera is 50mm and the lens-to-film distance (focal length plus extension from infinity position) is 100mm, and the normal *f*/stop would be 22, the corrected stop would be *f/11*.

Or, if you are using a 25mm lens, with 50mm lens-to-film distance, a normal *f*/stop of 8 should be corrected to *f/4*. Be sure to keep both focal length and distance in either mm or inches. Don't mix apples and oranges.

Photography: Flash Exposure

Use your computer to help take better pictures!
   The most important factor in pictures shot with flash is
the distance from your flash to the subject. Subjects
which are close to you will receive a lot of light while sub-
jects farther away will receive less light.
   Check your data sheet for the film you are using. Look
for the film guide number. Next, make an estimate of the
distance in feet from the flash to your subject.
   This program determines the proper f/stop setting for

your camera. By the way, if the computer tells you to use an f/stop setting between two f/numbers available on your camera, set your lens opening at the nearest f/number or halfway between the two, whichever is closest.

For example, suppose your film has a guide number of 80 and you estimate the flash-to-subject distance at 10 feet. Use f/8 on your lens.

90-Day Calendar

This program formats and prints out on paper a 90-Day Calendar. It creates a neat, standard calendar design which you'll love to run off upon request from family, friends, co-workers.

Key in your choice of months. Update every three

months or every month if you like.

To change month names in the printout, merely correct lines 100, 200 and 300. Then quickly key in the new day dates in lines 130-180, 230-270, and 330-370.

Naturally, many more months could be added to the program. In fact, it could become a 180-Day calendar or a One-Year Calendar, or whatever you would like to make it.

Alphabet Code

It not only is a lot of fun, but sometimes very useful to create a secret code. An easy way to create a code on your computer is to replace each of the 26 letters of the alphabet with a number. Then, you write secret messages using the code numbers in place of alphabet letters. To decipher messages in the same code, replace numbers with appropriate letters from a chart of this code.

Program Listing

```
10 "A" FOR L=1 TO 26
20 N=N+1:A=NN:Y=(997*X+A)/199:X=Y-INT Y
   :X=X*E 2
30 PRINT USING "####";L;X
40 NEXT L
50 END
```

High/Low Bowling Score

Suppose you bowl with a group of friends, each with a different score or set of scores? This program accepts their scores and sorts out the highest and the lowest bowling scores.

Here's how it works: at line 20 the program is dimensioned to hold data on 10 persons. Lines 30 to 70 take in the info on each person.

Naturally, this kind of sorting could be applied to any game with ranges of scores among different players.

Program Listing

```
 10 CLS
 20 DIM M(10)
 30 FOR L=1 TO 10
 40 PRINT "SCORE: ";
 50 INPUT M(L)

60-Second Timer

A one-minute timer can be very handy for fun-n-games. This easy-to-use clock "ticks" as it counts off seconds up to 60. When it reaches 60 seconds, it rings an alarm.

The number of seconds counted can be changed by changing the number 60 in line 20.

The clock can be calibrated by changing the number 750 in line 50. Line 50 is a time-delay loop set for approximately one second.

Lines 70-90 provide a rapid burst of five beeps when the clock reaches 60 seconds. To change the length of this alarm, change the number 70 in line 5.

Program Listing

```
10 HOME
20 FOR T=1 TO 60
30 PRINT CHR$(7)
40 PRINT T;" SECONDS"
50 FOR L=1 TO 750:NEXT L
60 NEXT T
70 FOR E=1 TO 5
80 PRINT CHR$(7)
90 NEXT E
```

News Ticker

It's Times Square all over again! This program simulates the crawling message of a news wire.

First the computer will ask for your message. Then it will display that message endlessly (until you press the RESET key).

To speed up, or slow down, the crawl, increase or decrease the number 200 in line 90.

For a test, in answer to the computer's query, "What is the news?", try typing in: The mayor of Smithville today announced he will retire next December.

Program Listing

```
10 HOME
20 PRINT"WHAT IS THE NEWS ?"
30 INPUT N$
40 HOME
50 L=LEN(N$)
60 FOR Y=1 TO L
70 B$=B$+MID$(N$,Y,1)
80 PRINT B$
90 FOR T=1 TO 200:NEXT T
100 HOME
110 NEXT Y
120 B$="":GOTO 80
```

Event Timer

The computer asks how many minutes you want for the event you are timing, and then it sounds a bell when the time has passed.

You can calibrate the clock by changing the value of SP in line 10. A larger number will slow down the clock. A smaller value for SP will speed up the clock. As you can see we have started with an SP value of 16.

It you want to time an event of less than one minute, use a decimal. For instance, when you want to time a 30-second event, respond to the computer's inquiry with .5 or for 45 seconds key in .75. Use .17 for 10 seconds; .25 for 15 seconds.

Program Listing

```
 10 HOME:SP=16
 20 PRINT"EVENT TIMER":PRINT
 30 PRINT"HOW MANY MINUTES"
 40 INPUT"TO THE END OF THE EVENT ";LT
 50 PRINT:PRINT"PRESS ANY KEY"
 60 PRINT"TO START TIMING"

Code Breaker

This fancy encoding and decoding program allows you to write secret messages in code and decode secret messages written in the same code. The use of a powerful *code key* format means only the largest computers in the world would have a chance at cracking your code and then only with great difficulty. For all intents and purposes, the code generated by this program is unbreakable.

Next, type in a secret number as a *code key* which only you, and others you tell, will know. The person using this program to decipher your message must have access to the same *code key* number, one way or another.

113

After you have typed in the *code key* number, the computer will ask you to type in a one-line message.

When the message has been completely entered, press ENTER and the encoded (or decoded) message will be displayed instantly on the screen. If you have encoded a new message, copy it off on paper and send it to a friend. If he has the same software in his computer and knowledge of the *code key* he will be able to type it into his computer and see it instantly decoded.

The same sequence of events happens while decoding as during encoding. Just type in the message to be decoded, press ENTER, and you get an instant translation.

The letter transpositions used in encoding rely on random numbers generated by the computer so the *code key* which controls the random-number generator is vital to being able to decipher someone else's message. It would be extremely difficult, if not impossible, to unravel the letter transpositions without the *code key*.

Program Listing

Jogger Logger

What a handy way to keep a record of your runs!
The program allows you to add new run records, review old records, erase all records. When you have completed a day's run, simply turn on the computer, select this program, and press A for ADD NEW RUN RECORD at the first menu. The computer will ask you for the run date.
Next the computer will ask for the distance you ran.
When the computer asks for the length of your run time, reply in minutes.

If you wish to review your old records, select that option by pressing the R key at the program's main menu. This will result in a display of your old records, one at a time. Press any key on the keyboard to call up the next record.

If you want to erase your entire log, select that option by pressing E at the main menu.

When you are through using the program, select Q to quit, at the main menu. The run will stop.

Great Circle Navigation

If you know the latitudes and longitudes of two points on Earth, the computer can find the shortest distance between those points and the azimuth from north toward east at the starting point.

Distance between the points is expressed in nautical miles. North latitude and east longitude are expressed as positive numbers while south latitude and west longitude

are negative numbers. You cannot use 90° north (North Pole) or 90° south (South Pole). Accuracy is less if the distance is under one nautical mile. N1 and E1 are start-points while N2 and E2 are endpoints.

Program Listing

```
 10 WAIT 120
 20 BEEP 1,1
 30 PRINT "*GREAT CIRCLE NAVIGATION*"
 40 INPUT "LATITUDE STARTPOINT",N1
 50 INPUT "LONGITUDE STARTPOINT",E1

120 PRINT L
130 NEXT L
140 CLS
150 PRINT "TIME IS UP"
160 PRINT S;" SECONDS HAVE ELAPSED"
170 PRINT
180 PRINT
190 GOTO 10
```

Password to Run

A user must enter the right password or the rest of the program won't run.

Program Listing

```
10 INPUT "WHAT IS PASSWORD?",PS$
20 IF PS$<>"GREEN"THEN END
30 PRINT "PROGRAM RUNS"
```

Three-Try Password

This variation gives you three cracks at it. In fact, you can change the number of tries allowed by changing the number 3 in the FOR/NEXT loop statement in line 10.

Program Listing

```
10 FOR L=1 TO 3
20 INPUT "WHAT IS PASSWORD?",PA$
30 IF PA$="RADIO" THEN GOTO 60
40 NEXT L
50 END
60 PRINT "PROGRAM RUNS"
```

Memory Search

Here's a quick way to study the contents of the RAM memory inside your computer.

Key in this simple program, using the powerful PEEK instruction, and your computer will reveal the contents of its memory.

Program Listing

```
10 INPUT "START NUMBER: ";N
20 C=PEEK N
30 WAIT 5
40 PRINT CHR$ C;
50 N=N+1
60 GOTO 20
```

Super Number Reverser

Enter any number and find it reversed on the display!

If you want only to display the reversed number, delete B = VAL(B$) from line 70. Or keep it in if you want to use the reversed number in math.

Program Listing

```
10 CLEAR:INPUT "GIVE ME A NUMBER",N$
```

```
 20 IF N$="" THEN GOTO 10
 30 L=LEN (N$)
 40 FOR Y=L TO 1 STEP -1
 50 B$=B$+MID$ (N$,Y,1)
 60 NEXT Y
 70 B=VAL (B$):BEEP 1
 80 PAUSE "REVERSE D:";B
 90 IF INKEY$="" THEN GOTO 80
100 CLEAR:BEEP 1:GOTO 10
```

Simulated RPN Calculator

The computer can be made to act very much like a calculator with Reverse Polish Notation (RPN).

The only difference here is you must hit the ENTER key after the math operator.

The time delay of display is adjustable at line 1010. If you need to see the total at any time, press R and the ENTER key. Total will be recalled with no math operation done.

To start a run , key in a number and press ENTER. For the remainder of the run, key in a number followed immediately by a math operator symbol. Your choices are limited to + , -, / and *. Don't use other keys except R and BREAK. BREAK ends the run.

You must hit the ENTER key to input your number and math operator, which is how it differs from true RPN.

Program Listing

```
1000 CLS:CLEAR
1010 BEEP 1,1:WAIT 120: PRINT T
1020 INPUT N$
1030 IF N$="R" PRINT T
1040 L=LEN N$
1050 IF ASC (RIGHT$ (N$,1))=42 GOTO 1100
1060 IF ASC (RIGHT$ (N$,1))=43 GOTO 1200
1070 IF ASC (RIGHT$ (N$,1))=45 GOTO 1300
1080 IF ASC (RIGHT$ (N$,1))=47 GOTO 1400
1090 T=T+VAL N$
1095 GOTO 1010
1100 S=VAL (LEFT$ (N$,L-1))
```

```
1110 T=T*S
1120 GOTO 1010
1200 S=VAL (LEFT$ (N$,L-1))
1210 T=T+S
1220 GOTO 1010
1300 S=VAL (LEFT$ (N$,L-1))
1310 T=T-S
1320 GOTO 1010
1400 S=VAL (LEFT$ (N$,L-1))
1410 T=T/S
1420 GOTO 1010
```

Simulated Algebraic Calculator

Similar to the RPN simulator but change all LEFT$ to RIGHT$ and all RIGHT$ to LEFT$ in lines 150 to 180 and lines 1100, 1200, 1300 and 1400.

Now, to enter numbers, put math operator before the number in standard algebraic-entry format. As an option you can choose to eliminate the plus sign math operator.

Program Listing
```
1000 CLS:CLEAR
1010 BEEP 1,1:WAIT 120:PRINT T
1020 INPUT N$
1030 IF N$="R" PRINT T
1040 L=LEN N$
1050 IF ASC (LEFT$ (N$,1))=42 GOTO 1100

How Money Grows

My, oh my, how your money grows when you put it in a savings account at a certain annual percentage rate of interest, compounded monthly, for a number of months.

This program asks for information on the initial principal saved, annual interest percentage rate, and number of months. The result is a moving display of the changes in principal as the months pass. The computer holds at the final month's display so you can see what you would have at that time.

Program Listing

```

Deposit Doubler

There's an old rule of thumb used by some bankers. It holds that money left on deposit in an interest-bearing account will *double* in value as interest compounds.

If you don't take this *Rule of 72nds* too seriously it can be a handy gauge to figure roughly the number of years you need to leave your money in a bank account (or other interest-bearing system) to see it double in value.

The rule holds that the number of years to double is about equal to the number 72 divided by the annual interest rate. The actual conversion is done in line 130 of this program. The rest of the program lines are input and output generators.

Mortgage Loans

Planning to buy a new home? Thinking of refinancing the old mortgage? This program computes either mortgage payment amount, number of payments or amount borrowed.

When you first run this program, you are presented with a menu of work options. If you wish to find the amount of payment on a certain mortgage, press P. If you wish to compute the number of payments to complete a mortgage, press N. To recall the original loan amount of an existing mortgage, press V.

If you wish to determine the monthly mortgage payment, the computer will ask for the original loan amount in dollars, the percentage interest rate, and the number of months in the life of the mortgage.

To find number of payments, the computer will require the original loan amount, the interest rate, and the monthly payment amount. To recreate the original amount of a mortgage, tell the computer payment, interest rate and number of months in the original agreement.

Installment Purchase Plan

What can be more confusing than the terms on your credit card? It can be a real hassle trying to get a payment figure from a store or loan company or bank for an installment purchase. With this program, you won't have to call or visit a lender to discover just how much your payment is going to be.

The computer will tell you how much you will have to pay on your installment-credit loan if you give it a few pieces of pertinent information.

Type the program listing below into your computer and RUN it. The computer will ask for the list price of the item you are buying. It will ask for the amount of the down payment you will be making at the time of the purchase. It will ask over how many payments you wish the loan spread. And, finally, it will ask for the annual interest rate percentage of the loan.

After completing its work the computer will tell you the amount of the monthly payment you will have to make on the loan.

Program Listing

```
10  CLS:CLEAR

Rule of 78's
Loan Interest Rebate

Paying off your consumer loan? Want to know if you are due a refund on interest and how much it will be? This program will allow the computer to compute the amount of interest you could overpay and the remaining balance of principal you must pay to satisfy the loan.

If you pay off the loan by paying all pre-computed payments, use this program to find how much refund, or *rebate*, is due you. If you haven't paid off the loan yet, use this program to determine the amount of principal to pay off without overpaying interest.

Using what bankers call the *Rule of 78's*, you must supply the number of the current payment, the total number

of installment payments for which the loan originally was written, and the original total finance charge or amount of interest dollars.

Program Listing

```

Loan Payments

This money program finds the amount of payment to be made on a loan, or the original loan amount, often referred to as *present value*, or the number of payments to be made on a loan.

We use the variable PV for loan amount, or present

value. PY is the amount of the payment and N is the number of months of payments. The annual interest percentage is I.

Checkbook Balancer

One of life's little headaches is reconciling your checkbook register or check stubs with the monthly statement from your bank.

Normally, your checkbook balance will not match the balance shown on your bank statement. That's because you write checks which haven't reached the bank by the time the statement is mailed or make deposits after the bank completed its work on your statement. In other words, there are checks or deposits which haven't cleared by the time the bank mails your statement to you.

This program allows your computer to help you reconcile the difference between the bank's statement and your checkbook balance.

Program Listing

```
10 REM CHECKBOOK BALANCER
20 CLEAR
30 DIM CN(100),CA(100),D(100)

```

Reconciling a N.O.W. Account

N.O.W. stands for *negotiable order of withdrawal.*
These accounts have become very popular in banking
circles in recent years. Similar to checking accounts, they
are more complex in that your money in the account earns
interest while on deposit.

Such accounts often also provide for automatic
transfers of your money to make car payments, mortgage
payments, etc. In addition, interest on certificates of
deposit (CDs) and other accounts may be credited to your
N.O.W. account by your bank. So, there could be lots of
activity in one month in your account to keep track of.
This situation is ideal for computer assistance.

Finance Charge Refund

Once in a while you get lucky enough to repay an installment loan *before* the final due date. When that happens you may be entitled to a refund of part of the finance charge.

How much rebate is due? The percentage rebate is found in a rebate-schedule table. In this program, we have a portion of such a schedule.

Imbedded in program lines 70 to 200 is data from a rebate-scheduled table. Our table allows loans with lengths of time set at 3, 6, 9, 12, 15 and 18 months. The number of elapsed months runs from 1 to 14.

You type in the original total finance charge on your

installment loan, the original number of months for which the loan was set up, and the number of months the loan has run so far. Be sure to use either 3, 6, 9, 12, 15 or 18 for the original number of months. Use from 1 to 14 for the number of months the loan has run. Use actual dollars for the original total finance charge.

Electric Bill Analysis

Confused by your electric bill? Think you're being stung? Can't figure when you used all that juice? Now you can analyze your bills for a one-year period and see where you are draining the local utility.

The computer will report annual totals, monthly averages of kilowatt hours used, and the cost of those kilowatts. Most folks receive an electric bill every other month and the computer assumes that's the case. It counts on two months of service per bill.

You can give the computer information from your electric bills in any monthly order. The program sorts the monthly bills into chronological order within one year.

Savings Quickie

Want a quick idea of how much your savings account will grow over the years? This program is fast to load and speedy to run.

The computer will ask for initial savings balance, annual interest percentage rate, and number of years. In return, it computes compound interest and displays the savings balance at the end of each year in a handy list.

Program Listing

```
10 CLS:CLEAR
20 INPUT"PRESENT SAVINGS BALANCE";B
30 INPUT"INTEREST RATE";I
40 INPUT"NUMBER OF YEARS";Y
50 FOR L=1 TO Y
60 Z=Z+I*(Z+B)/100
70 PRINT L,Z+B
80 NEXT L
90 END
```

Monthly Loan Payment

Here's a fast computation of the monthly payment on a loan. The amount borrowed, the principle, is stored in memory location P. I is the annual interest rate and N is the number of payments. I is converted to a monthly interest rate and then to a decimal in line 50.

Program Listing

```
10  PRINT ")":REM CLEAR SCREEN
20  PRINT "AMOUNT BORROWED $ ";:INPUT P
30  PRINT "ANNUAL INTEREST % ";:INPUT I
40  PRINT "NUMBER OF PAYMENTS ";:INPUT N
50  I=0.01*(I/12)
60  M=(P*I)/(1-((1+I)^(-N)))
70  PRINT
80  PRINT "MONTHLY PAYMENT IS $";M
90  PRINT :PRINT :PRINT
100 GOTO 20
```

Automobile:
Miles per Gallon and Cost per Mile

With gasoline shortages always a threat, it's impor-

tant to know just how much gas your car is using to travel a mile—and how much that mile costs in dollars.

This program lets the computer find the total distance you have traveled since the last time you filled your car's gas tank. It reports miles per gallon; gas cost per gallon; and gas cost per mile.

Program Listing

```
10 CLS
20 CLEAR
30 PRINT "CURRENT ODOMETER READING?"

```

Automobile:
Miles Left in Gas Tank

Make a conservative estimate of the number of miles per gallon you have been getting out of your car recently. Check the car's owners manual for information about the capacity of the gas tank. Recall the odometer reading at the last gas fill-up. Using this information, the computer will be able to tell you how many miles you can drive before your gas tank runs dry.

Program Listing

Bank Loans

This handy program will allow you to compute payment, length of time or amount borrowed for your next bank loan.

If you know the amount you want to borrow, the interest rate you will be charged, and the length of time you need the money, the computer will figure your payment.

If you know how much you can pay, the current interest rate, and the length of time you will need to repay, the computer will tell you how much you can borrow.

Or, if you know the amount of payment, the interest rate, and the original amount you borrowed, it will compute the number of payments.

Program Listing

Decreasing Debts

Ever wonder how many months it will take to pay off all your bills? Got several credit cards, all with balances requiring monthly payments? Using this program, the computer accepts information from you about those balances and payments. It computes the ratio of payment to balance and then uses that ratio to estimate future balances and payment amounts for the coming months.

It's very useful in estimating just how quickly the balances on your credit cards will go down and how the payments on revolving accounts will drop each month as you make payments on accounts.

Remember this is only an estimate—but a handy one!

Program Listing

```
 10 "B" CLEAR
 20 INPUT "OPENING BALANCE $";B
 30 INPUT "KNOWN PAYMENT $";P
 40 R=P/B
 50 FOR K=1 TO 999
 60 B=B-P:P=RB
 70 PAUSE "AFTER ";K;" MONTHS..."
 80 PRINT "NEW BALANCE = $";B
 90 PRINT "NEW PAYMENT = $";P
100 NEXT K
110 GOTO 20
```

Savings Accumulation

Like to see your money grow in a savings account or investment paying interest? Here's a way to know just how much it will grow over the years.

Suppose you make a deposit of the same amount each month for several years. How much will you have at the end of those years?

This program instructs the computer to accept information about the amount of money in the account and the amount added each month. It computes the total amount in the account after each year. You must leave both principle and interest in the account to accumulate, of course.

The program is good up to 999 years.

We store the initial principle amount in memory location P; amount added each month is S; and the annual interest rate in I.

Program Listing

```
 10 "A" CLEAR
 20 INPUT "INITIAL $";P
 30 INPUT "MONTHLY SAVING $";S
 40 INPUT "INTEREST % ";I
 50 L=I/100+1
 60 PAUSE "STARTING WITH $";P;"..."
 70 FOR K=1 TO 999
 80 P=PL+12S
 90 PAUSE "AFTER ";K;" YRS..."
100 PRINT "PRINCPLE = $";P
110 NEXT K
120 GOTO 20
```

Shopper's Friend

Take your computer along the next time you go shopping!

This program finds the computer asking for certain information and then telling you which product brand name is the best buy.

The computer wil ask for the brand name of a product, the quantity in the product package, and the price of the

package. Then it will ask for the name, quantity and price for a second product.

After digesting all this information, it will tell you the brand name of the best-buy product and show you the unit prices for both brand names so you can agree with the computer's judgment.

Program Listing

```
 10 PRINT "SHOPPERS FRIEND"

Foreign Capitals

Here's a learning quiz we'll bet you haven't seen anywhere else. This program tests your knowledge of foreign countries. The more you play, the more you learn!

You must tell the computer the correct name of the capital of the country it presents. And you must spell the name of that city correctly.

Number Of Days In A Month

Here's a cute teacher for your elementary-age kids. This program displays the name of a month and asks how many days in that month. If the correct number of days is entered, the computer says "correct." If an incorrect number of days is entered, the computer says "wrong." In either case, the correct answer is displayed. The educational game can go on forever if needed.

Bubble Sort

This program sorts names, labels, words, letters into alphabetical order, A to Z. As written here it will accept up to 26 items, sort them, and print a list of those names horizontally across the screen in alphabetical order. Then it prints the list in original entry order for comparison. It shows that the items really were sorted and none were lost!

You may type in a list of up to 26 items. If you type in fewer than 26, press ENTER without data to exit the entry loop and get on with sorting.

Program Listing

```
10 CLS:CLEAR

Astronomy
Lightyears/Distance Conversions

For students of astronomy everywhere, here's how to plug your computer into your hobby: use the machine to discover distances across the Universe!

This program converts lightyears to kilometers or kilometers to lightyears or lightyears to miles or miles to lightyears. It's hard to visualize distances in lightyears. Run this program and you'll be better able to grasp the vast expanse of the Cosmos with your mind.

Of course, all distances are approximate. We use 365.86 days per year and, thus, 9.4830912×10^{12} km/ly or $5.892792872 \times 10^{12}$ mi/ly.

```

Body Surface Area

This medical program finds the surface area of a human body, using DuBois's formula and Boyde's formula.

BSA is Body Surface Area. BSA(D) is the area computed via DuBois's formula. BSA(B) is found by Boyde's formula. The DuBois formula produced significant errors when computing area of a child's body of smaller than $0.6m^2$. In that case, the Boyde formula is used.

For this program, heighth is figured in centimeters and weight in kilograms. If BSA(D) is less than 0.6, use BSA(B).

Program Listing

```
10 WAIT 120
20 PRINT "****BODY SURFACE AREA****"
30 INPUT "HEIGHTH (CM): ";H
40 INPUT "WEIGHT (KG): ";W
50 BD=(H^.725)*(W^.425)*(71.84*(10^-4))
60 WAIT 300
70 PRINT "B.S.A.(D):";BD
80 W=W*(10^3)
90 BB=(H^.3)*(W^(.7285-(.0188*LOG W)))
   *(3.207*10^-4)
100 PRINT "B.S.A.(B):";BB
110 IF INKEY$ ="" THEN 110
120 CLEAR
130 GOTO 30
```

Urea Removal

There is another medical program, this time finding the rate of generation of urine by a human body.

The program causes the computer to correct automatically for body surface area, depending upon

175

whether you key in a zero or BSA in response to the prompt.

Program Listing

```
 10  INPUT "VT=";V
 20  INPUT "U=";U
 30  INPUT "B=";B
 40  INPUT "ENTER ZERO OR BSA: ";F
 50  IF F<>0THEN LET V=(1.73/F)*V
     :PRINT "V*=";V
 60  GOSUB SGN (SGN(V-2)-1)*10+110
 70  PRINT "CS=";C
 80  PRINT "<CS>=";D
 90  GOTO 10
100  C=(U*√V)/B:D=1.85*C:RETURN
110  C=(U*V)/B:D=1.33*C:RETURN
```

Canadian Provinces

Another interesting learning experience. Test your knowledge of the Canadian provinces.

You must correctly identify the name of each capital and spell it properly.

```

Receiver Sensitivity

Sensitivity is the ability of a radio receiver to respond to signals. Published sensitivity ratings for your receiver, in microvolts, can be converted to power ratings by changing microvolts (uV) to dBf.

This program computes dBf when uV are known. A 300-ohm antenna input to the receiver is assumed. Note that, in hi-fi, sensitivity is not the same for monaural and stereo so stereo tuners and receivers should include separate dBf figures for each.

In this program, we store microvolts in memory location V and, after computation, dBf is in D.

Program Listing

```
10 CLS

```

Horsepower

Horsepower can be converted to watts. Watts can be changed to horsepower. This set of instructions will let you have your choice on the computer. And, if you are converting horsepower to watts, you get a conversion of watts to kilowatts as a bonus.

We use one horsepower as equal to 746 watts or as equal to 550 foot-pounds per second. One watt then is 1/746 horsepower which is 0.00134 horsepower.

Program Listing

```

Math Flasher

Flash cards for memorizing and practicing math problems have been around since Grandpa was a boy. They used to be printed cards which you manually displayed to the testee. Now, the computer does the job and all you have to do is sit by and watch.

With this program, you select addition, subtraction, multiplication or division. The computer randomly selects a pair of numbers and creates the necessary math problem.

We assume it is desirable to *not* have negative numbers

as results of subtraction. We want subtraction problems which result in answers of zero, one, two and higher. None below zero such as -1, -2, -3 or lower. The program will present only pairs of numbers which result in the desired values.

Also, in division, we want whole-number answers like 2, 11 or 26. Not 1.81, 9.7, or 21.334. The program controls for the desired answers.

Program Listing

```
10 PRINT "ADDITION"

Volcanoes of the World

In what country does the lava flow? Where is the active volcano we know as Mauna Loa? Lascar? Fogo? Torbert?

The computer names a volcano and you name the country, except in the one case in Antarctica which is a continent.

Class Roll Sorter

Here's a simple sorting routine which you can use to keep your class roll in order. Suppose it's the first day of classes and you have been handed an unorganized list of student names. Merely key those names into the computer and it will use this "bubble sort" program to put the list in alphabetical order. As set up, it accepts up to 20 names.

Program Listing

```
10 CALL CLEAR
20 DIM M$(20)
30 FOR L=1 TO 20
40 INPUT "NAME: ":M$(L)
50 IF M$(L)="" THEN 70
60 NEXT L
70 CALL CLEAR
80 PRINT "SORTING NOW"
90 T=0
100 FOR L=1 TO 19
110 IF M$(L)<=M$(L+1)THEN 160
120 E$=M$(L)
130 M$(L)=M$(L+1)
140 M$(L+1)=E$
150 T=1
160 NEXT L
170 IF T=1 THEN 90
180 CALL CLEAR
190 CALL SOUND(2,1000,1)
200 FOR L=1 TO 20
210 IF M$(L)<>"" THEN 230
220 GOTO 240
230 PRINT M$(L)
240 NEXT L
```

Exam Score Sorting

The final number scores of a large number of test results can be categorized and thereby cut down into a smaller quantity of numbers easily.

This program accepts exam scores and divides them into ranges we have labeled A, B, C, D and F. The program looks for test scores in a range of zero to 100. The predetermined grade ranges are F=0 to 59; D=60 to 69; C=70 to 79; B=80 to 89; and A=90 to 100.

Program Listing

```
10 CALL CLEAR
20 PRINT "ENTER A GROUP OF SCORES"
30 PRINT "RANGING FROM ZERO TO 100"
40 PRINT "ONE AT A TIME."
50 PRINT
60 PRINT "ENTER X AFTER LAST SCORE"
70 PRINT
80 INPUT "SCORE: ":G$
90 IF G$="X" THEN 600
100 G=VAL(G$)
110 N=N+1
120 IF G<60 THEN 140
130 GOTO 160
140 F=F+1

Teacher's Grade-Curve Graph

The computer asks the teacher for the quantity of grades in each of the letters, A, B, C, D and F. Then a vertical bar braph is created on the display screen.

The range of quantities you can use for each letter grade must be from zero to 50.

Program Listing

```
10  CLS:CLEAR
20  GOSUB 1000
30  PRINT"TYPE IN THE TOTAL NUMBER FOR
    EACH GRADE"

90 GOTO 50
100 INPUT"ASCII VALUE: ";A
110 PRINT CHR$(A)
120 PRINT" "
130 GOTO 20
200 INPUT"CHARACTER: ";CH$
210 PRINT ASC(CH$)
220 PRINT" "
230 GOTO 20
```

Sentence Writer

Practice your English!

Exhibit your knowledge of nouns and verbs. This program leads the computer to solicit individual words from you and use those words to create sentences.

Besides helping you better understand verbs, nouns and simple declarative sentence structures, the program demonstrates the computer's ability to simulate conversation and communication.

Program Listing

```
10 PRINT "A PLURAL NOUN = ?";
20 INPUT N$
25 PRINT "A VERB = ?";
30 INPUT V$
35 PRINT "A SINGULAR NOUN = ?";
40 INPUT S$
50 CLS
60 PRINT "THE "+N$+" "+V$+" "+S$+"."
65 PRINT
70 GOTO 10
```

Resistance

Here's just what the electronics hobbyist or technician has always needed: a program to compute total resistances among resistors in parallel or in series.

Program Listing

```
 10 "L" CLEAR
 20 PRINT "TOTALING RESISTORS..."
 30 PRINT "IN SERIES OR PARALLEL"
 40 INPUT " S OR P ? ";X$
 50 IF X$="S" THEN 120
 60 INPUT "OHMS = ";R
 70 IF R=0 THEN 100
 80 A=A+1/R:T=1/A:R=0
 90 GOTO 60
100 PRINT "TOTAL =";T
110 T=0:A=0:GOTO 40
120 INPUT "OHMS = ";R
130 IF R=0 THEN 160
140 T=T+R:R=0
150 GOTO 120
160 PRINT"TOTAL OHMS = ";T
170 T=0:GOTO 40
```

Time Constants
Series RL and Series RC

In electronics, in RL circuits, the time it takes a current to reach 63.2 percent of peak is important. If you know the impedance in henrys and the resistance in ohms, this program will compute the RL time constant in seconds.

Time also is important in RC circuits. Time, that is, for the voltage across a capacitor to reach 63.2 percent of peak. If you know the resistance in ohms and the capacitance in farads, this program computes the time constant in seconds.

Program Listing

```
 10 "S" CLEAR
 20 PRINT "TIME CONSTANT"
 30 PRINT "FOR SERIES RL OR RC..."
 40 INPUT " RL OR RC ?",X$
 50 INPUT "OHMS = ";R
 60 IF X$="RL" THEN 100
 70 IF X$="RC" THEN 200
 80 GOTO 20
100 INPUT"HENRYS = ";L
110 T=L/R
120 PRINT "SECONDS = ";T
130 GOTO 20
200 INPUT"FARADS = ";C
210 T=RC
220 PRINT "SECONDS = ";T
230 GOTO 20
```

Heating Effect of Current

Current passing through a wire generates heat. How much? This program computes that heat in calories-per-second if resistance in ohms is known.

We store the number of ohms in memory location R and, after computation, the heat in H.

Program Listing

```
10 "H" CLEAR
20 INPUT "OHMS RESISTANCE =",R
30 H=.057168R
40 PRINT "CALORIES/SEC HEAT=";H
50 GOTO 10
```

Diagonal of a Square

This handy programming quickie computes the length of the diagonal of any square.

The length of any side of the square is stored in memory location L. The diagonal length is computed and stored in D. For instance, if you have a square with sides each 36 units long, the diagonal of the square is 50.904 units.

Program Listing

```
10 "D" CLEAR
20 INPUT "SIDE LENGTH = ";L
30 D=1/414L
40 PRINT "DIAGONAL = ";D
50 GOTO 10
```

dB

Here's a handy quickie for engineers, radio technicians, electronics buffs, hams, shortwave listeners and others who know how many bels there are in a decibel.

Program Listing

```
10 "DB" CLEAR
20 BEEP 1:INPUT"INPUT POWER = ";I
30 BEEP 1:INPUT"OUTPUT POWER = ";O
40 D=10*LOG(O+I)
50 BEEP 2:PRINT D;" DB"
60 GOTO 10
```

State Capitals

Idaho. Let's see. Boise. *Correct. Capital is Boise. Minnesota.* Minneapolis. *Wrong. Capital is St. Paul.* How many of the 50 state capitals can you name? Bet not as many as you would like!

This program tests not only knowledge of the name of each state capital but also the correct spelling of that name. The test goes on forever until you BREAK.

Program Listing

History of Invention

When was the zipper invented? The sprinkler? The light bulb? The elevator? The aerosol spray? Here's an endless source of pleasure in a solid learning experience, a quiz on your knowledge of the history of science, technology and invention.

You must identify correctly the year the invention was made.

Alphabetizing Test Evaluation

Here's a more elaborate exam-score evaluation. As set here, you may enter scores for up to 50 students. The computer asks for last name, first name, and score number for each student.

The machine sorts students so it can present an alphabetized list at the end.

Again we assume zero to 59, F; 60-69, D; 70-79, C; 80-89, B; and 90-100, A. You can change those ranges in lines 1110-1150.

Program Listing

```

```

Screen Full

Fill your video screen with   square dots, starting from the upper left, moving down and across to the lower right. Line 200 is a freeze frame.

Program Listing

```
 10 CLS
100 FOR X=1 TO 21 STEP 2
110 FOR Y=1 TO 21 STEP 2
120 PRINT AT X,Y;CHR$ 128
130 NEXT Y
140 NEXT X
200 GOTO 200
```

Sine Wave

Note that some complex screen art can be created with only a few program lines. You will want to refine these programs to make them even shorter.

Program Listing

```
10 CLS
20 FOR X=1 TO 63
30 LET Y=SIN X + 10
40 PLOT X,Y
50 NEXT X
60 GOTO 60
```

Create A Table

This program generates a table of values, as a demonstration on how to set up a table on the video display.

Program Listing

```
  5 RAND
 10 LET A=0
 20 LET B=0
 30 LET T=0
 40 PRINT CHR$ 166,CHR$ 167
 50 GOSUB 900
 60 IF X>50 THEN LET A=A+1
 70 IF X>50 THEN GOTO 50
 80 GOSUB 900
 90 IF X>50 THEN LET B=B+1
100 IF X>50 THEN GOTO 80
110 PRINT A,B
120 IF T=10 THEN STOP
130 LET A=0
140 LET B=0
150 LET T=T+1
160 GOTO 20
900 LET X=INT(100*RND)
910 RETURN
```

Centered Message

The computer will highlight your message by centering it on the video screen.

Use this handy centering program for titles and other important parts of longer programs.

Program Listing

```
 10 LET A$=" "
100 PRINT "MESSAGE:"
110 INPUT M$
200 LET L=LEN M$
210 LET T=L+4
220 FOR Z=1 TO T
230 LET A$=A$+"*"
```

```
240 NEXT Z
250 LET P=(40-T)/2
260 CLS
300 PRINT TAB P;A$
310 PRINT TAB P;"* ";M$;" *"
320 PRINT TAB P;A$
```

Beautiful Braided Rug

Just goes to show that some of the most attractive computer graphics require some of the shortest programs.

Program Listing

```
10 FOR X=1 TO 20 STEP 2
20 FOR Y=1 TO 20 STEP 2
30 PRINT AT X,Y;CHR$ 8
40 PRINT AT X+1,Y+1;CHR$ 128
50 NEXT Y
60 NEXT X
```

Eyeball Scrambler

Blink. Blink. Blink. It's enough to make your eyeballs hurt!

The screen is filled with all the many printable keyboard characters. Some flash on and off. Some do not. Creates a very lively display!

Program Listing

```
10 LET X=INT(30*RND)
20 LET Y=INT(20*RND)
30 LET C=INT(256*RND)
40 PRINT AT Y,X;CHR$ C
50 GOTO 10
```

Draw A Line

There are different ways to draw a line on the Computer screen.

Program Listing

```
10 LET A$=""
20 FOR L=1 TO 30
30 LET A$=A$+"*"
40 NEXT L
50 PRINT A$
```

Program Listing

```
10 FOR L=1 TO 30
20 PRINT CHR$ 128
30 NEXT L
```

Program Listing

```
10 FOR X=1 TO 50
20 PLOT X,10
30 NEXT X
```

Program Listing

```
10 FOR Y=1 TO 25
20 PLOT 20,Y
30 NEXT Y
```

Draw Bar Graphs

Drawing graphs on the video screen are a popular form of communication today. This program establishes a bar graph on the display.

We have selected the business-like example, shown here, to demonstrate how you go about setting up a bar graph on the TV screen.

Program Listing

```
10 PRINT "1979 PROFITS"
20 INPUT A
30 CLS
40 PRINT "1980 PROFITS"
50 INPUT B
60 CLS
70 PRINT "1981 PROFITS"
80 INPUT C
```

```
 90 CLS
100 LET X$=""
110 PRINT TAB 9;"PROFITS"
200 PRINT AT 3,Ø;"1979 ";
210 FOR L=1 TO A
220 LET X$=X$+CHR$ 128
230 NEXT L
240 PRINT X$
250 LET X$=""
300 PRINT AT 5,Ø;"1980 ";
310 FOR L=1 TO B
320 LET X$=X$+CHR$ 128
330 NEXT L
340 PRINT X$
350 LET X$=""
400 PRINT AT 7,Ø;"1981 ";
410 FOR L=1 TO C
420 LET X$=X$+CHR$ 128
430 NEXT L
440 PRINT X$
```

Random Bar Graph

If you don't have any particular data to display, but would like to see   how these   bar graphs work, try this program.

Program Listing

```
 10 RAND
 20 LET X$=""
 30 PRINT TAB 9;"PROFITS"
 40 PRINT AT 3,Ø;"1978 ";
 50 GOSUB 400
 60 PRINT AT 5,Ø;"1979 ";
 70 GOSUB 400
 80 PRINT AT 7,Ø;"1980 ";
 90 GOSUB 400
100 STOP
400 FOR L=1 TO INT(27*RND)
410 LET X$=X$+CHR$ 128
420 NEXT L
430 PRINT X$
```

```
440 LET X$=""
450 RETURN
```

Number reverser

Give the computer any three-digit number and, as a result of using this particular small programming trick, it will reverse the original number.

Program Listing

```
10 "N" CLEAR
20 INPUT"GIVE ME 3-DIGIT NUMBER",N
30 IF N<1 THEN 20
40 IF N>999 THEN 20
50 A=INT(N/100)
60 B=INT(10*(N/100-A))
70 C=INT(10*(N/10-INT(N/10)))
80 PRINT USING"##";C;B;A
90 GOTO 10
```

Changing signs

This technique changes a negative number to a positive number. It also deletes either a plus-sign or a minus-sign, using the ABS function.

Program Listing

```
10 INPUT A
20 B=ABS A
30 PRINT B
40 GOTO 10
```

Fraction Inverter

Just for fun, and to demonstrate the power tucked into the INSTR function, we take fractions and turn them up-sidedown.

Program Listing

```
10 CLS
20 LINE INPUT"FRACTION ";FR$
30 DV=INSTR(FR$,"/")
```

```
 40 SL=LEN(FR$)
 50 NU$=LEFT$(FR$,DV-1)
 60 DE$=RIGHT$(FR$,SL-DV)
 70 N=VAL(NU$)
 80 D=VAL(DE$)
 90 PRINT D;"/";N
100 PRINT D/N
110 GOTO 20
```

Making Change

A penny saved is a penny earned. Every businessman is aware of pennies, nickels, dimes, even quarters lost by sales people who can't make correct change. If you have sales people accepting cash away from your register, or if you're too small to have a cash register, use this program to make *correct* change.

Program Listing

```
 10 CLS:CLEAR
 20 INPUT"NEW SALE AMOUNT IN CENTS ";X
 30 INPUT"AMOUNT TENDERED IN CENTS ";T
 40 PRINT
 90 A=T-X
100 IF A<25 THEN 140
110 Q=Q+1
120 A=A-25
130 GOTO 100
140 IF A<10 THEN 180
150 D=D+1
160 A=A-10
170 GOTO 140
180 IF A<5 THEN 220
190 N=N+1
200 A=A-5
210 GOTO 180
220 P=A
230 PRINT"CORRECT CHANGE IS:"
240 PRINT Q;" QUARTERS"
250 PRINT D;" DIMES"
260 PRINT N;" NICKLES"
270 PRINT P;" PENNIES"
```

```
280 PRINT"PRESS M FOR MORE OR Q TO QUIT"
290 K$=INKEY$
300 IF K$="" THEN 290
310 IF K$="M" THEN 10
320 IF K$="Q" THEN END
330 GOTO 280
```

Income Property Cash Flow Analysis

Here's a handy program to put your computer to work on your real estate investments. Potential gross income, effective gross income, net operating income, and gross spendable cash are the before-tax cash flows of interest.

In computing these cash flows, one first finds the potential gross income by multiplying rent per unit you own times the number of units you own and that times the number of rental payment periods per year. The result will be the rental income you could expect if the property were fully occupied.

Next, you must deduct an allowance for vacancies and rental losses which you will have. This usually is a percentage and the result will be your rent collections. These rent collections would be the same as your effective gross income if you have no other income.

If you have other income, such as receipts from concessions like laundry equipment and other money produced by sources other than rental office space, add it in. The result will be effective gross income.

Now deduct your operating expenses which are those expenditures you must make to keep the property capable of producing the gross income. The result will be the net operating income.

Finally, deduct your annual debt service (interest) on the mortgage and you will find the gross spendable cash.

Program Listing

```
10 CLS:CLEAR
20 INPUT"NO. UNITS FOR RENT";U
30 INPUT"MONTHLY RENT PER UNIT $";R
40 G=12*R*U
```

```
50 INPUT"VACANCY RATE %";V
60 L=G*(.01*V)
70 INPUT"OTHER INCOME $";OI
80 EG=G+OI-L
90 INPUT"ANNUAL OPERATING COST $";OC
100 NI=EG-OC
110 INPUT"MORTGAGE ANNUAL DEBT SERVICE
    $";DS
120 SC=NI-DS
130 CLS
140 PRINT"POTENTIAL GROSS INCOME $";G
150 PRINT"VACANCY LOSS            $";L
160 PRINT"OTHER INCOME           $";OI
170 PRINT"EFFECTIVE GROSS INCOME $";EG
180 PRINT"NET OPERATING INCOME   $";NI
190 PRINT"MORTGAGE DEBT SERVICE  $";DS
200 PRINT "GROSS SPENDABLE CASH   $";SC
300 IF INKEY$="" THEN 300
310 GOTO 10
```

Daily Codes

Businesses everywhere are concerned about security. Banks, credit managers, warehousemen, shipping clerks, office managers, retail storekeepers, all need private daily codes for internal use to prevent unauthorized admission to private files, storage areas, financial records.

Now you can use your computer to generate a weekly set of codes for each day. If you feel insecure about a week's list in use, the computer will give you a new set of code numbers in a flash.

The computer generates a table of randomly-selected codes for seven days at a time.

Program Listing

```
 10 GOSUB 300
100 PRINT "SUNDAY:    ";C
110 GOSUB 300
120 PRINT "MONDAY:    ";C
130 GOSUB 300
140 PRINT "TUESDAY:   ";C
```

```
150 GOSUB 300
160 PRINT "WEDNESDAY: ";C
170 GOSUB 300
180 PRINT "THURSDAY:    ";C
190 GOSUB 300
200 PRINT "FRIDAY:      ";C
210 GOSUB 300
220 PRINT "SATURDAY:    ";C
230 STOP
300 LET C=INT(10000*RND)
310 IF C<1000 THEN GOTO 300
320 RETURN
```

Invoice Computer

There's a lot of repetitious math work to be done before you mail invoices to your customers. This software has the computer collect a few pertinent bits of data from you and then present all the various totals you need to plug into an invoice.

It gives you a total retail price for all goods sold on the invoice, total sales tax if applicable, shipping charges and the grand total amount due you from your customer.

Program Listing

```
 10 PRINT "QUANTITY SOLD: ";
 20 INPUT Q
 30 PRINT Q
 40 PRINT "UNIT PRICE: $";
 50 INPUT P
 60 PRINT P
 70 PRINT "SALES TAX RATE PERCENT: ";
 80 INPUT S
 90 PRINT S
100 PRINT "SHIPPING CHARGES: $";
110 INPUT H
120 PRINT H
130 LET S=S*.01
140 LET C=Q*P
150 LET T=C*S
```

```
160 LET F=C+T+H
170 LET A=INT(100*C+.5)/100
180 LET B=INT(100*T+.5)/100
190 LET D=INT(100*F+.5)/100
200 CLS
210 PRINT "TOTAL PRICE = $";A
220 PRINT "SALES TAX = $";B
230 PRINT "SHIPPING CHARGES = $";H
240 PRINT
250 PRINT "INVOICE TOTAL = $";D
260 IF INKEY$="" THEN GOTO 260
270 CLS
280 GOTO 10
```

Hourly Wages

These useful lines compute total hours worked at regular pay and number of hours worked at time-and-a-half overtime. The computer then finds gross pay and rounds off to the nearest cent.

The program knows that overtime starts after 40 hours. It makes payroll bookkeeping quick and simple.

Program Listing

```
 10 LET T=∅
 20 LET W=∅
 30 PRINT "HOURLY PAY RATE = $";
 40 INPUT P
 50 PRINT P
 60 PRINT "NUMBER HOURS WORKED = ";
 70 INPUT H
 80 PRINT H
 90 IF H>40 THEN LET T=H-40
100 IF H>40 THEN GOTO 140
110 LET W=H*P
120 PRINT "GROSS WAGES = $";W
130 STOP
140 LET W=(40*P)+(T*P*1.5)
150 GOTO 120
```

Ad Campaign Profit

The ad salesman is standing in your office pressing for your answer. Do you want to advertise or not? Advertising costs plenty of money today. How can you make a quick decision about whether or not sales from advertising would be worth the cost?

In this program, the computer asks you for information about the list price of the item you would sell through advertising. It asks for the manufacturing cost of that item; the cost of the advertising campaign; and the number of units sold.

It computes your gross sales and deducts the cost of manufacturing and advertising to show an estimate of profits to be expected. If you key in a zero in response to the number-sold question, the machine will inquire as to the amount of profit you would like to make and then tell you how many units you would have to sell to make such a profit.

Program Listing

```
 10 PRINT "ITEM LIST PRICE: ";
 20 INPUT B
 30 PRINT "$";B
 40 PRINT "MFG COST: ";
 50 INPUT C
 60 PRINT "$";C
 70 PRINT "AD COST: ";
 80 INPUT D
 90 PRINT "$";D
100 PRINT "QUANTITY SOLD: ";
110 INPUT A
120 PRINT A
130 IF A=∅ THEN GOTO 300
200 LET E=A*B-A*C-D
210 PRINT "$";E;" PROFIT"
220 GOTO 400
300 PRINT "PROFIT WANTED: $";
310 INPUT F
320 PRINT F
```

```
330 LET A=(F+D)/(B-C)
340 PRINT "YOU MUST SELL ";A
350 PRINT "FOR $";F;" PROFIT"
400 PRINT
410 PRINT
420 PRINT "TO DO ANOTHER, PRESS ANY KEY"
430 IF INKEY$="" THEN GOTO 430
440 CLS
450 GOTO 10
```

Advertising Cost-per-Thousand

Suppose your local radio station time salesman told you he could deliver 51,000 listeners for each $133 ad run on his station. And your local newspaper space salesman said he could deliver 160,000 readers for each $330 ad run in his paper. Which would be the better quantity buy for you?

This program gives you the answers in black and white. The newspaper would cost you about $2.06 for each 1000 readers while the radio station would cost almost $2.61 per thousand listeners. Now all you need to decide is which audience you prefer.

By the way, the cost-per-thousand comparison applies to magazines, TV, or any medium.

Program Listing

```
10 CLS
20 CLEAR
30 PRINT "COST OF AD ? ";
40 INPUT A
50 PRINT "$";A
60 PRINT "CIRCULATION ? ";
70 INPUT C
80 PRINT C
90 LET M=1000*(A/C)
100 PRINT
120 PRINT "$";M;" COST/THOUSAND"
130 FOR Q=1 TO 10
140 PRINT
150 NEXT Q
```

```
160 PRINT "TO DO MORE PRESS ENTER"
170 INPUT K$
180 GOTO 10
```

Advertising
Cost-per-Unit Sold

Your favorite newspaper had the lowest cost-per-thousand so you ran an ad. The ad cost you $330. Lots of customers came by to check out your merchandise and you actually sold 77 pieces. What'd it cost you to sell each item?

With this quickie program you'll know it cost you $4.28 in ad money to sell each unit.

Program Listing

```
10 CLS
20 CLEAR
30 PRINT "COST OF AD ? ";
40 INPUT A
50 PRINT "$";A
60 PRINT "UNITS SOLD ? ";
70 INPUT U
80 PRINT U
90 LET C=A/U
100 LET C=INT (100*C+0.5)/100
110 PRINT
120 PRINT "THE AD COST $";C;" PER UNIT
    SOLD"
130 FOR Q=1 TO 10
140 PRINT
150 NEXT Q
160 PRINT "TO DO MORE PRESS ENTER"
170 INPUT K$
180 GOTO 10
```

Media Money Massage

If you have used the *Ad Campaign Profit* program earlier in this book, you know how many bucks you can expect to make from advertising. But, suppose two

salesmen are standing in your office. One from your local newspaper and the other from a local television station. Both want your advertising dollar and you can't decide which is the best buy. Let your computer decide!

This program compares the cost of advertising in two media and reports which is most favorable. First it computes cost-per-thousand. Then it highlights the least-expensive medium.

Program Listing

```
10 PRINT "FIRST MEDIUM: ";
20 INPUT N$
30 PRINT N$
40 PRINT "AD COST: $";
50 INPUT A
60 PRINT A
70 PRINT "CIRCULATION: ";
80 INPUT C
90 PRINT C
100 LET M=1000*(A/C)
110 PRINT "SECOND MEDIUM: ";
120 INPUT P$
130 PRINT P$
140 PRINT "AD COST: $";
150 INPUT Q
160 PRINT Q
170 PRINT "CIRCULATION: ";

To Nearest 95 Cents

Many companies like to price their goods at a figure ending in 95 cents. For instance, a ten dollar item might be marked $9.95 or $10.95.

Here's a program which demonstrates how to make all prices come out to the nearest 95 cents.

Program Listing

```
10 LET P=0
20 PRINT "MANUFACTURING COST:"
25 INPUT C
30 PRINT "PRICING MULTIPLIER:"
35 INPUT M
40 LET P=INT (C*M)+0.95
50 CLS
```

```
60 PRINT "RETAIL PRICE: $";P
70 PRINT
80 GOTO 10
```

To the Nearest Penny

This program is useful when you have a dollar-and-cents figure with more than two decimal places. For example, $151.6972. You need to transform $151.6972 to the more common $151.70

Program Listing

```
 10 LET R=0
 20 PRINT "ENTER A NUMBER TO"
 30 PRINT "MORE THAN TWO DECIMAL PLACES"
 40 PRINT "ORIGINAL AMOUNT $ = "
 50 INPUT N
 60 LET R=INT(100*N+.5)/100
 70 CLS
 80 PRINT "TO THE NEAREST PENNY"
 90 PRINT "$";N;" IS $";R
100 PRINT
110 GOTO 10
```

Percentage Off

For example, how much is 40 percent off? This program can be used to interpret 40 percent off and compute the decimal value needed. Try 40 percent off $100. The computer will change 40 percent off into decimal value 0.60. If you multiply 0.60 times $100 you find $60 is 40 percent off $100.

Line 30 makes the important translation.

Program Listing

```
10 PRINT "PERCENTAGE OFF: ";
20 INPUT P
30 PRINT P
40 PRINT "DECIMAL: ";(1-0.01*P)
50 PRINT
60 GOTO 10
```

Dollars & Cents

If the result of your computation is a "money" answer, and you don't know whether to display it in dollars or cents, let the computer decide.

Program Listing

```
 10 LET T=0
 20 PRINT "QUANTITY = ";
 30 INPUT P
 40 PRINT P
 50 PRINT "TOTAL COST = $";
 60 INPUT C
 70 PRINT C
 80 LET T=C/P
 90 IF T<1 THEN GOTO 130
100 PRINT "EACH COST $";T
110 PRINT
120 GOTO 10
130 LET T=100*T
140 PRINT "EACH COST ";T;" CENTS"
150 PRINT
160 GOTO 10
```

Shipments

A bar graph displaying number of shipments per month can be a useful way to see the trend in the movement of inventory from your warehouse.

Program Listing

Gross & Net Computer

In response to its inquiries on the display, tell the computer how much it costs to manufacture your thingamabob, what its list price is and at what discount you plan to sell the thingamabobs. As soon as you tell the computer how many thingamabobs you will sell, it will compute the total invoice amount you will charge your customer and your anticipated profits after manufacturing costs are deducted.

Normal Distribution

This statistics program allows the computer to find normal distribution by Hastings' best approximation.

Program Listing

```
10 WAIT 120
20 PRINT "***NORMAL DISTRIBUTION***"
30 INPUT "X=";X
40 T=1/(1+(.2316419*X))
50 Q=(1/(√(2*π)))*(EXP (-(X∧2/2)))
60 A=.31938153
70 B=-.356563782
80 C=1.78147937
90 D=-1.821255978
100 E=1.330274429
110 PX=1-Q*((A*T)+(B*T∧2)+(C*T∧3)+(D*T∧4)
    +(E*T∧5))
120 PRINT PX
130 IF INKEY$ ="" THEN 130
140 CLEAR
150 GOTO 30
```

Spearman's Coefficient

The computer is great at statistics! Here it finds Spearman's coefficient of rank correlation.

Program Listing

```
10 WAIT 120
20 PRINT "****RANK CORRELATION****"
30 WAIT Ø
40 C=Ø
50 N=1
60 PRINT "A";N;"=";:INPUT A$
70 IF A$="X"THEN GOTO 150
80 A=VAL A$
90 CLS
100 PRINT "B";N;"=";:INPUT B
110 CLS
120 C=C+((A-B)∧2)
130 N=N+1
140 GOTO 60
150 WAIT 300
160 N=N-1
170 R=1-((6*C)/(N∧3-N))
```

```
180 PRINT "R=";R
190 GOTO 10
```

Aggregate Classification

The computer will find the aggregate classification and will do prorating. In this set of program lines, we treat the data as money or financial items. The program could just as well be used as an exam-score sorter or inventory dollar-value sorter or some other kind of sorter.

The result of the run is a neat list, broken down by code group classification. You can change the print wording if you like.

Program Listing

```
10 WAIT 120
20 PRINT "*AGGREGATE CLASSIFICATION*"
30 CLEAR
40 DIM C(10)
50 INPUT "CODE: ";N$
60 IF N$="X"THEN 200
70 N=VAL N$
80 INPUT "AMOUNT: $";D
90 C(N)=C(N)+D
100 T=T+D
110 GOTO 50
200 GOSUB 300
210 LPRINT "CODE";TAB 8;"AMOUNT"
220 GOSUB 300

Pythagorean Theorem

The theorem lets you find the length of any side of a right triangle if you know the length of the other two sides. The two shorter sides of the triangle are labeled A and B. The longer side, the hypotenuse, is C. The length of C is always longer than A or B.

Program Listing

```
10 "H" CLEAR
20 BEEP 1:INPUT"SIDE A LENGTH = ";A
30 BEEP 1:INPUT"SIDE B LENGTH = ";B
40 IF A THEN 60
50 GOTO 70

120 IF B THEN 150
130 B=√(C∧2-A∧2)
140 GOTO 190
150 C=√(A∧2+B∧2)
160 GOTO 210
170 BEEP 2:PRINT"SIDE A = ";A
180 GOTO 10
190 BEEP 2:PRINT"SIDE B = ";B
200 GOTO 10
210 BEEP 2:PRINT"HYPOTENUSE = ";C
220 GOTO 10
```

Rounding Off Numbers

You often don't need a number answer from the computer with a fractional part displayed as decimal. Rounded off to the nearest whole number is fine. This program, which can stand alone or be worked into a larger program as a subroutine, rounds a decimal to the nearest whole number.

There are two views on how to round off. One holds that "if the number is more than five, you round up." Which means that exactly .5 rounds down. Another view is that "any number less than five rounds down," in which case exactly .5 rounds up!

The first set of line listings below is for the fellow with the "more than five rounds up" philosophy.

Program Listing

```
 10 "A" CLEAR
 20 BEEP 1
    :INPUT" NUMBER TO BE ROUNDED",N
 30 IF N>INT N THEN 50
 40 R=N:GOTO 100
 50 D=N-INT N
 60 IF D>.5 THEN 90
 70 R =INT N
 80 GOTO 100
 90 R=INT N +1
100 BEEP 1:PAUSE N;" ROUNDS TO..."
110 PRINT R
120 GOTO 10
```

The second set of program lines rounds off on the "less than five rounds down" theory.

Program Listing

```
 10 "B" CLEAR
 20 BEEP 1
    :INPUT" NUMBER TO BE ROUNDED",N
 30 IF N>INT N THEN 50
 40 R=N:GOTO 100
```

```
 50 D=N-INT N
 60 IF D<.5 THEN 90
 70 R=INT N + 1
 80 GOTO 100
 90 R=INT N
100 BEEP 1:PAUSE N;" ROUNDS TO..."
110 PRINT R
120 GOTO 10
```

Fractional Portion of a Number

Most computers make it easy to obtain the integer value of a number. It's a bit harder to get rid of the integer and keep only the decimal value, to the right of the decimal point in the original number. This program gets rid of the integer portion of the number and displays the decimal part. It also would make a good subroutine in a larger program.

Program Listing

```
10 "D" CLEAR
20 BEEP 1:INPUT"ORIGINAL NUMBER =",N
30 F=N - INT N
40 BEEP 2:PRINT F
50 GOTO 20
```

Median and Mean

Frequently it's important to know some facts about a group of numbers. It's convenient to have a list of the highest number among several; the lowest number; the full span of the range of numbers; the total of all numbers; the average number and the median number.

This program lets you enter a set of numbers into the computer. You key in the letter X after your last entry and the computer crunches the numbers down into median, mean, total, range, low and high.

Program Listing

```
10 "M" CLEAR
```

```
 20 X=999
 30 FOR E=1 TO 999
 40 INPUT "NUMBER = ";G
 50 IF G=X THEN 120
 60 N=N+1
 70 IF N=1 LET L=G:H=G
 80 IF G<L LET L=G
 90 IF G>H LET H=G
100 S=S+G
110 NEXT E
120 P=S/N:M=L+((H-L)/2)
140 PRINT "THERE WERE ";N;" NUMBERS"
150 PRINT "NUMBERS RANGED"
160 PRINT "FROM ";L;" TO ";H
170 PRINT "NUMBERS TOTALED ";S
180 PRINT "MEDIAN IS ";M
190 PRINT "AVERAGE (MEAN) IS ";P
200 GOTO 10
```

Circle Circumference

Know the diameter of a circle? The radius? This program will take your information and tell you how far it is around the perimeter of the circle.

We store the radius in memory location R. After computation, the circumference of the circle is stored in C. If you know the diameter, divide it by two to get the radius. Enter that radius in the computer when it asks for it.

Program Listing

```
10 "C" CLEAR
20 INPUT "RADIUS = ";R
30 C=2πR
40 PRINT "CIRCUMFERENCE = ";C
50 GOTO 10
```

Delta Y Conversion

Electrical engineers, technicians, experimenters, now you can use your computer to convert $\Delta \rightarrow Y$ and $Y \rightarrow \Delta$ quickly.

Figure 1 is the schematic diagram for $\Delta \rightarrow Y$ conversion and figure 2 is for $Y \rightarrow \Delta$ conversion. When you run the program, the computer will clearly ask which you want.

Depending upon your selection of conversion direction, the computer then will ask for values for R_1 and R_2 and R_3 or it will ask for R_4 and R_5 and R_6.

For a sample run, try these values in a RUN:

Input

R_1	12 ohms
R_2	47 ohms
R_3	82 ohms

Output

R_4	4 ohms
R_5	27.33333333 ohms
R_6	6.978723404 ohms

Which is largest?

Suppose you have a group of numbers and you would like to know which is the largest within the group. Here's a software routine to locate the largest number.

Program Listing

```
 10 "A" CLEAR
 20 FOR Z=1 TO 10
 30 BEEP 1:INPUT"NUMBER = ";A(Z)
 40 IF A(Z)=ØTHEN 70
 50 N=N+1
 60 NEXT Z
 70 Y=A
 80 FOR X=2 TO N
 90 IF A(X) < = A THEN 110
100 Y=A(X)
110 NEXT X
120 BEEP 1:PRINT" LARGEST # = ";Y
130 GOTO 10
```

Highest and lowest

Here's how to find the highest and lowest numbers within a group of numbers. Lines 130, 140 and 150 accomplish the task.

In 130, if the number is the first of a series, then it is set to both highest (H) and lowest (L). At 140, any number lower than L gets to be the new lowest number. at 150, any higher than H gets to be highest.

Program Listing

```
10 "G" CLEAR
20 PAUSE"ENTER SCORES"
30 X=999
40 FOR E=1 TO 999
```

```
50 INPUT"SCORE = ";G
60 IF G=X THEN 180
70 N=N+1
80 IF G<60 LET F=F+1:GOTO 130
90 IF G<70 LET D=D+1:GOTO 130
100 IF G<80 LET C=C+1:GOTO 130

120 A=A+1
130 IF N=1 LET L=G:H=G
140 IF G<L LET L=G
150 IF G>H LET H=G
160 S=S+G
170 NEXT E
180 P=S/N:M=L+((H-L)/2)
190 PRINT"SCORES RANGE ";L;" TO ";H
200 PRINT"MEDIAN SCORE =";M
210 PRINT"AVERAGE (MEAN) =";P
220 PAUSE"TOTALS OF EACH GRADE"
230 PRINT A;" A"
240 PRINT B;" B"
250 PRINT C;" C"
260 PRINT D;" D"
270 PRINT F;" F"
280 PRINT"TOTAL ";N;" SCORES"
290 GOTO 10
```

Mid-range number

How to know the middle of a range of numbers? Line 180, above, accomplished the job.

Every 10th Answer

This program generates a random number in the range of zero to 999. However, it has a difference. It only shows you every tenth number it generates.

Line 20 generates the numbers. Line 40 selects the tenth number from each set.

```
10 PRINT "}":REM CLEAR SCREEN
20 T=INT(1000*(RND(1)))
30 V=V+1
40 IF 0.1*V=INT(0.1*V) THEN PRINT V,T
50 GOTO 20
```

Random Numbers: Zero To Nine

Although you see four program lines below, what we really have here is a very convenient single-line program for you to insert in a larger game or educational-testing program.

Line 20 is the winner here. It prints a random number from zero to nine every time. For your use here, we print that number on the screen. You could just as easily have the computer store that random number in a memory location for later recall and use.

We have added lines 10, 30 and 40 to make your computer show a whole series of random numbers from zero to nine. Remember, line 20 is the important single-line program element here.

If you would like random numbers in the range from zero to 99, make it 100* in line 20. For zero to 999, use 1000* in line 20.

Program Listing

```
10 PRINT "}":REM SCREEN CLEAR
20 PRINT INT(10*(RND(1)))
30 FOR L=1 TO 200:NEXT L
40 GOTO 20
```

Random Numbers: Distribution

Ever wonder how "random" are the numbers

generated by the random-number generator in your computer when you use the RND instruction? Try this program.

It generates 100 random numbers in a range from zero to nine and counts how many there are of each number between zero and nine.

By the way, while it is doing that it will display the message "counting" so you can tell it is working.

At the end of its run, the computer prints a neat chart, on the video display, of results.

Program Listing

```
10 PRINT "}":REM SCREEN CLEAR
20 FOR L=1 TO 100
30 N=INT(10*(RND(1)))
40 IF N=0 THEN A=A+1
50 IF N=1 THEN B=B+1
60 IF N=2 THEN C=C+1
70 IF N=3 THEN D=D+1
80 IF N=4 THEN E=E+1
90 IF N=5 THEN F=F+1
100 IF N=6 THEN G=G+1
110 IF N=7 THEN H=H+1
120 IF N=8 THEN I=I+1
130 IF N=9 THEN J=J+1
140 PRINT "COUNTING"
150 NEXT L
160 PRINT "}":REM CLEAR SCREEN
170 PRINT "}":REM BUZZER
200 PRINT "0",A
210 PRINT "1",B
220 PRINT "2",C
230 PRINT "3",D
240 PRINT "4",E
250 PRINT "5",F
260 PRINT "6",G
270 PRINT "7",H
280 PRINT "8",I
290 PRINT "9",J
300 END
```

Random Numbers: Averages

This program generates 100 random numbers and totals them. Then it finds the average of all 100 numbers.

In fact, the average number itself is a useful new random number.

To make the program run again, press the RETURN key on the computer's keyboard.

Program Listing

```
10 PRINT "}":REM CLEAR SCREEN
20 FOR L=0 TO 99
30 N=INT(10*(RND(1)))
40 NT=NT+N
50 PRINT "AVERAGING"
60 NEXT L
70 PRINT "}":REM SCREEN CLEAR
80 AV=NT/100
90 PRINT "TOTAL OF 100 RANDOM NUMBERS"
100 PRINT "BETWEEN ZERO AND NINE IS ";NT
110 PRINT "AVERAGE IS ";AV
200 DIM K$(1)
210 PRINT "FOR MORE, PRESS RETURN"
220 INPUT K$
230 CLR :GOTO 10
```

Random Numbers: Sorting High/Low

It's important to be able to sort a group of numbers to see what the highest and lowest values are. This program does that.

The random number generator is in line 30. It gives numbers in a range of zero to 999. Line 50 determines the lowest number in the set and line 60 finds the highest number.

Program Listing

```
10 PRINT "}":REM SCREEN CLEAR
20 FOR L=0 TO 99
30 N=INT(1000*(RND(1)))
40 IF L=0 THEN LN=N:HN=N
50 IF N<LN THEN LN=N
60 IF N>HN THEN HN=N
70 PRINT "SORTING"
80 NEXT L
90 PRINT CHR$(253):REM BUZZER
100 PRINT "}":REM CLEAR SCREEN
110 PRINT "LOW NUMBER IS ",LN
120 PRINT "HIGH NUMBER IS ",HN
200 END
```

Random Number
Quality Checker

Ever wonder just how unintentional, haphazard, or unrelated your random numbers are? This program reinforces your confidence in the pseudorandom number generator in the computer.

It causes the machine to generate 100 numbers between zero and 100 and reports how many are above 49 and how many are below 50.

Just for fun, we've thrown in an executive decision maker. That is, the board of directors voted 47 yes, 53 no. Can you imagine it?

Program Listing

```
10 PRINT "}":REM CLEAR SCREEN
20 CLR
30 FOR L=1 TO 100
40 X=INT(100*(RND(1)))
50 IF X<50 THEN Y=Y+1
60 IF X>49 THEN N=N+1
70 NEXT L
```

```
80 PRINT "YES:",Y
90 PRINT "NO:",N
100 PRINT
110 GOTO 20
```

Sample Run

```
YES:        48
NO:         52

YES:        58
NO:         42

YES:        50
NO:         50

YES:        54
NO:         46
```

Sneaky seeds

Random numbers are very important in many computer programs. Most of all, in games. One of the few shortcomings of several computers is the lack of a convenient RND command to generate random numbers. In lieu of this easy method, you have to use a brief math exercise to generate numbers. This way you can generate pseudorandom numbers.

Why pseudorandom? Because though they often appear not to repeat themselves, eventually a string of numbers from any of these generators will repeat. The longer the string gets before the series of numbers starts over, the better the generator.

Sometimes, you need any old random number. In that case, the easiest to obtain is a decimal between zero and one. At other times, you'll need random numbers between one and six (for dice games); between zero and nine (for games where moves depend upon spinning for a number

between zero and nine); between zero and 99 (where two-digit numbers are needed); etc.

Any of these combinations can be obtained by the computer.

The *seed* number in a generator is the number you give it, before it generates, to set a starting point for its internal math. Games aren't as much fun if you have the computer ask: GIVE ME A SEED NUMBER.

You need something more attuned to the game at hand. Or to the player. Often, one of the best ways to be sneaky in getting a seed number is to have the computer converse with the player. For instance, the computer might ask, HOW OLD ARE YOU? This should generate a seed number from the player, somewhere between 1 and 99.

Other good conversational gambits include WHAT GRADE ARE YOU IN? for young players; HOW MANY PLAYERS? for a complex game; HOW MANY ASSISTANTS DO YOU NEED? for a detective game; HOW MANY MEN ON DECK? for a battleship game; or HOW MUCH GOLD IS BURIED? for a treasure game.

Players will enjoy the game more if they feel as if they are talking with the computer. Be sure they don't use the same seed over or the string of random numbers will be the same.

By the way, you could have the machine think up the first number but, since it has no RND function, that first seed would always be the same so the string of numbers would always be the same.

222 BASIC Computer Programs for Home, School & Office

by Don Roberts

For the home, classroom, office, lab, an all-new volume of tested ready-to-run BASIC software for all computers. This is a giant library of practical, useful, efficient BASIC programs for all home and personal computers. This is indispensable software to make your computer do real work!

A total of **222 complete ready-to-run programs** is included in the extensive collection in this one handy volume. These programs are written in the most universal forms of the BASIC language and will run with only slight modification on any computer set up to be programmed in BASIC. In no time at all, you'll have these functional, down-to-earth, sensible programs typed into your computer and ready to run.

The almost-limitless supply of serviceable programs in this book includes, for the *home*, electric bill analysis, event timer, photography, interest on money, club member list, horoscope, poetrywriter, monthly loan payment, savings account interest, wisecracking insulter, bowling score sorter, titles, ordering, sorting, billboards, searching, error trapping, secret messages, percentages, lots of exciting games, and many, many more.

For the *student and teacher,* history geography, areas, volumes, timers, exam evaluators, chemistry, passwords, dollars & cents, weights & measures, and much, much more.

For the *small-business person,* daily code chart, profit estimator, invoice computer, payroll, commissions, ad campaign profits, unit price, wages and hours, gross & net, executive decision maker, pricing, mark-up, and lots more.

●Each program in this book is complete and ready to be tailored to the BASIC language in your own computer. Each can be used alone or worked into a larger set of program lines. Check the BASIC in your computer against these lines, type in the perfected program, and it runs! What could be easier? And where can you find a better bargain on such practical software?

These programs are ideal for newcomers, and novices as well old-hands at the programming game.
